Chapter 1

Main Page

This is the main page for the Schwarz library pdf documentation. The repository is hosted on [github](#). Documentation on aspects such as the build system, can be found at the [# Installation Instructions](#) page.

Modules

The structure of the Schwarz Library code is divided into different [modules](#) :

- [Initialization](#) : Handles the initialization of the problem and the solver.
- [Communicate](#) : Handles the communication.
- [Solve](#) : Handles the local solution and the convergence detection.
- [Schwarz Class](#) : The Classes related to the Schwarz solvers.
- [Utils](#) : Provides some basic utilities.

Chapter 2

Installation Instructions

Building

Use the standard cmake build procedure:

```
mkdir build; cd build
cmake -G "Unix Makefiles" [OPTIONS] .. && make
```

Replace [OPTIONS] with desired cmake options for your build. The library adds the following additional switches to control what is being built:

- `-DSCHWARZ_BUILD_BENCHMARKING={ON, OFF}` Builds some example benchmarks. Default is ON
- `-DSCHWARZ_BUILD_METIS={ON, OFF}` Builds with support for the METIS partitioner. User needs to provide the path to the installation of the METIS library in `METIS_DIR`, preferably as an environment variable. Default is OFF
- `-DSCHWARZ_BUILD_CHOLMOD={ON, OFF}` Builds with support for the CHOLMOD module from the Suitesparse library. User needs to set an environment variable `CHOLMOD_DIR` to the path containing the CHOLMOD installation. Default is OFF
- `-DSCHWARZ_BUILD_CUDA={ON, OFF}` Builds with CUDA support. Though Ginkgo provides most of the required CUDA support, we do need to link to CUDA for explicit setting of GPU affinities, some custom gather and scatter operations. Default is OFF.
- `-DSCHWARZ_BUILD_CLANG_TIDY={ON, OFF}` Builds with support for clang-tidy Default is OFF
- `-DSCHWARZ_BUILD_DEALII={ON, OFF}` Builds with support for the finite element library deal.ii Default is OFF
- `-DSCHWARZ_WITH_HWLOC={ON, OFF}` Builds with support for the hardware locality library used for binding hardware. hwloc is distributed as a part of the Open-MPI project. Default is ON
- `-DSCHWARZ_DEVEL_TOOLS={ON, OFF}` Builds with some developer tools support. Default is ON. In particular uses `git-cmake-format` to automatically format the source files with `clang-format`.

Tips

- If you are having CUDA problems and you are not using CUDA, then feel free to switch the CUDA module off with `-DSCHWARZ_BUILD_CUDA=off`.
- Installing CHOLMOD can be a bit annoying. TODO add some details on fixing Suitesparse compilation.
- When doing merge commits it is possible that make format does not work. You can run `cmake -DSCHWARZ_DEVEL_TOOLS=OFF ..` to temporarily switch off the formatting. Please switch it on again when committing normally.

Chapter 3

Testing Instructions

Chapter 4

Benchmarking.

Benchmark example 1.

Poisson solver using Restricted Additive Schwarz with overlap.

The flag `-DSCHWARZ_BUILD_BENCHMARKING` (default ON) enables the example and benchmarking snippets. The following command line options are available for this example. This is setup using `gflags`.

The executable is run in the following fashion:

```
“sh [MPI_COMMAND] [MPI_OPTIONS]
```

Chapter 5

Module Documentation

5.1 Communicate

A module dedicated to the Communication interface in schwarz-lib.

Namespaces

- [schwz::CommHelpers](#)
The CommHelper namespace .
- [ProcessTopology](#)
The ProcessTopology namespace .

Classes

- class [schwz::Communicate< ValueType, IndexType >](#)
The communication class that provides the methods for the communication between the subdomains.
- struct [schwz::Metadata< ValueType, IndexType >](#)
The solver metadata struct.

5.1.1 Detailed Description

A module dedicated to the Communication interface in schwarz-lib.

5.2 Initialization

A module dedicated to the initialization and setup and usage of the solvers in schwarz-lib.

Namespaces

- [schwz::PartitionTools](#)
The [PartitionTools](#) namespace .
- [ProcessTopology](#)
The [ProcessTopology](#) namespace .

Classes

- class [schwz::device_guard](#)
This class defines a device guard for the cuda functions and the cuda module.
- class [schwz::Initialize< ValueType, IndexType >](#)
The initialization class that provides methods for initialization of the solver.
- struct [schwz::Settings](#)
The struct that contains the solver settings and the parameters to be set by the user.
- struct [schwz::Metadata< ValueType, IndexType >](#)
The solver metadata struct.

5.2.1 Detailed Description

A module dedicated to the initialization and setup and usage of the solvers in schwarz-lib.

5.3 Schwarz Class

A module dedicated to the Schwarz solver classes in schwarz-lib.

Classes

- class `schwz::SolverRAS< ValueType, IndexType >`
An implementation of the solver interface using the RAS solver.
- class `schwz::SchwarzBase< ValueType, IndexType >`
The Base solver class is meant to be the class implementing the common implementations for all the schwarz methods.

5.3.1 Detailed Description

A module dedicated to the Schwarz solver classes in schwarz-lib.

5.4 Solve

A module dedicated to the solvers including local solution and convergence detection in schwarz-lib.

Namespaces

- [schwz::ConvergenceTools](#)
The [ConvergenceTools](#) namespace .
- [schwz::SolverTools](#)
The [SolverTools](#) namespace .

Classes

- struct [schwz::Metadata](#)< [ValueType](#), [IndexType](#) >
The solver metadata struct.
- class [schwz::Solve](#)< [ValueType](#), [IndexType](#) >
The Solver class the provides the solver and the convergence checking methods.

5.4.1 Detailed Description

A module dedicated to the solvers including local solution and convergence detection in schwarz-lib.

5.5 Utils

A module dedicated to the utilities in schwarz-lib.

Classes

- struct `schwz::Utils< ValueType, IndexType >`
The utilities class which provides some checks and basic utilities.

5.5.1 Detailed Description

A module dedicated to the utilities in schwarz-lib.

Chapter 6

Namespace Documentation

6.1 ProcessTopology Namespace Reference

The [ProcessTopology](#) namespace .

6.1.1 Detailed Description

The [ProcessTopology](#) namespace .

proc_topo

6.2 schwz Namespace Reference

The Schwarz wrappers namespace.

Namespaces

- [CommHelpers](#)

The CommHelper namespace .

- [ConvergenceTools](#)

The ConvergenceTools namespace .

- [PartitionTools](#)

The PartitionTools namespace .

- [SolverTools](#)

The SolverTools namespace .

Classes

- class [Communicate](#)
The communication class that provides the methods for the communication between the subdomains.
- class [device_guard](#)
This class defines a device guard for the cuda functions and the cuda module.
- class [Initialize](#)
The initialization class that provides methods for initialization of the solver.
- struct [Metadata](#)
The solver metadata struct.
- class [SchwarzBase](#)
The Base solver class is meant to be the class implementing the common implementations for all the schwarz methods.
- struct [Settings](#)
The struct that contains the solver settings and the parameters to be set by the user.
- class [Solve](#)
The Solver class the provides the solver and the convergence checking methods.
- class [SolverRAS](#)
An implementation of the solver interface using the RAS solver.
- struct [Utils](#)
The utilities class which provides some checks and basic utilities.

6.2.1 Detailed Description

The Schwarz wrappers namespace.

6.3 schwz::CommHelpers Namespace Reference

The CommHelper namespace .

6.3.1 Detailed Description

The CommHelper namespace .

comm_helpers

6.4 schwz::ConvergenceTools Namespace Reference

The [ConvergenceTools](#) namespace .

6.4.1 Detailed Description

The [ConvergenceTools](#) namespace .

conv_tools

6.5 schwz::PartitionTools Namespace Reference

The [PartitionTools](#) namespace .

6.5.1 Detailed Description

The [PartitionTools](#) namespace .

part_tools

6.6 schwz::SolverTools Namespace Reference

The [SolverTools](#) namespace .

6.6.1 Detailed Description

The [SolverTools](#) namespace .

solver_tools

Chapter 7

Class Documentation

7.1 BadDimension Class Reference

[BadDimension](#) is thrown if an operation is being applied to a LinOp with bad dimensions.

```
#include <exception.hpp>
```

Public Member Functions

- [BadDimension](#) (const std::string &file, int line, const std::string &func, const std::string &op_name, std::size_t op_num_rows, std::size_t op_num_cols, const std::string &clarification)
Initializes a bad dimension error.

7.1.1 Detailed Description

[BadDimension](#) is thrown if an operation is being applied to a LinOp with bad dimensions.

7.1.2 Constructor & Destructor Documentation

7.1.2.1 BadDimension()

```
BadDimension::BadDimension (
    const std::string & file,
    int line,
    const std::string & func,
    const std::string & op_name,
    std::size_t op_num_rows,
    std::size_t op_num_cols,
    const std::string & clarification ) [inline]
```

Initializes a bad dimension error.

Parameters

<i>file</i>	The name of the offending source file
<i>line</i>	The source code line number where the error occurred
<i>func</i>	The function name where the error occurred
<i>op_name</i>	The name of the operator
<i>op_num_rows</i>	The row dimension of the operator
<i>op_num_cols</i>	The column dimension of the operator
<i>clarification</i>	An additional message further describing the error

```

115         : Error(file, line,
116               func + ": Object " + op_name + " has dimensions [" +
117                   std::to_string(op_num_rows) + " x " +
118                   std::to_string(op_num_cols) + "]: " + clarification)
119     {}

```

The documentation for this class was generated from the following file:

- exception.hpp (96003b3)

7.2 schwz::Settings::comm_settings Struct Reference

The settings for the various available communication paradigms.

```
#include <settings.hpp>
```

Public Attributes

- bool `enable_onesided` = false
Enable one-sided communication.
- bool `enable_overlap` = false
Enable explicit overlap between communication and computation.
- bool `enable_put` = false
Put the data to the window using MPI_Put rather than get.
- bool `enable_get` = true
Get the data to the window using MPI_Get rather than put.
- bool `enable_one_by_one` = false
Push each element separately directly into the buffer.
- bool `enable_flush_local` = false
Use local flush.
- bool `enable_flush_all` = true
Use flush all.
- bool `enable_lock_local` = false
Use local locks.
- bool `enable_lock_all` = true
Use lock all.

7.2.1 Detailed Description

The settings for the various available communication paradigms.

The documentation for this struct was generated from the following file:

- settings.hpp (96003b3)

7.3 schwz::Communicate< ValueType, IndexType >::comm_struct Struct Reference

The communication struct used to store the communication data.

```
#include <communicate.hpp>
```

Public Attributes

- int [num_neighbors_in](#)
The number of neighbors this subdomain has to receive data from.
- int [num_neighbors_out](#)
The number of neighbors this subdomain has to send data to.
- std::shared_ptr< gko::Array< IndexType > > [neighbors_in](#)
The neighbors this subdomain has to receive data from.
- std::shared_ptr< gko::Array< IndexType > > [neighbors_out](#)
The neighbors this subdomain has to send data to.
- std::vector< bool > [is_local_neighbor](#)
The bool vector which is true if the neighbors of a subdomain are in one node.
- int [local_num_neighbors_in](#)
The number of neighbors this subdomain has to receive data from.
- int [local_num_neighbors_out](#)
The number of neighbors this subdomain has to send data to.
- std::shared_ptr< gko::Array< IndexType > > [local_neighbors_in](#)
The neighbors this subdomain has to receive data from.
- std::shared_ptr< gko::Array< IndexType > > [local_neighbors_out](#)
The neighbors this subdomain has to send data to.
- std::shared_ptr< gko::Array< IndexType * > > [global_put](#)
The array containing the number of elements that each subdomain sends from the other.
- std::shared_ptr< gko::Array< IndexType * > > [local_put](#)
The array containing the number of elements that each subdomain sends from the other.
- std::shared_ptr< gko::Array< IndexType * > > [remote_put](#)
The array containing the number of elements that each subdomain sends from the other.
- std::shared_ptr< gko::Array< IndexType * > > [global_get](#)
The array containing the number of elements that each subdomain gets from the other.
- std::shared_ptr< gko::Array< IndexType * > > [local_get](#)
The array containing the number of elements that each subdomain gets from the other.
- std::shared_ptr< gko::Array< IndexType * > > [remote_get](#)
The array containing the number of elements that each subdomain gets from the other.
- std::shared_ptr< gko::Array< IndexType > > [window_ids](#)
The RDMA window ids.

- `std::shared_ptr< gko::Array< IndexType > >` [windows_from](#)
The RDMA window ids to receive data from.
- `std::shared_ptr< gko::Array< IndexType > >` [windows_to](#)
The RDMA window ids to send data to.
- `std::shared_ptr< gko::Array< MPI_Request > >` [put_request](#)
The put request array.
- `std::shared_ptr< gko::Array< MPI_Request > >` [get_request](#)
The get request array.
- `std::shared_ptr< gko::matrix::Dense< ValueType > >` [send_buffer](#)
The send buffer used for the actual communication for both one-sided and two-sided.
- `std::shared_ptr< gko::matrix::Dense< ValueType > >` [recv_buffer](#)
The recv buffer used for the actual communication for both one-sided and two-sided.
- `std::shared_ptr< gko::Array< IndexType > >` [get_displacements](#)
The displacements for the receiving of the buffer.
- `std::shared_ptr< gko::Array< IndexType > >` [put_displacements](#)
The displacements for the sending of the buffer.
- `MPI_Win` [window_recv_buffer](#)
The RDMA window for the recv buffer.
- `MPI_Win` [window_send_buffer](#)
The RDMA window for the send buffer.
- `MPI_Win` [window_x](#)
The RDMA window for the solution vector.

7.3.1 Detailed Description

```
template<typename ValueType, typename IndexType>
struct schwz::Communicate< ValueType, IndexType >::comm_struct
```

The communication struct used to store the communication data.

7.3.2 Member Data Documentation

7.3.2.1 global_get

```
template<typename ValueType , typename IndexType >
std::shared_ptr<gko::Array<IndexType *> > schwz::Communicate< ValueType, IndexType >::comm←
\_struct::global\_get
```

The array containing the number of elements that each subdomain gets from the other.

For example. `global_get[p][0]` contains the overall number of elements to be received to subdomain `p` and `global←
_put[p][i]` contains the index of the solution vector to be received from subdomain `p`.

Referenced by `schwz::SchwarzBase< ValueType, IndexType >::initialize()`, `schwz::SolverRAS< ValueType, IndexType >::setup_comm_buffers()`, and `schwz::SolverRAS< ValueType, IndexType >::setup_windows()`.

7.3.2.2 global_put

```
template<typename ValueType , typename IndexType >
std::shared_ptr<gko::Array<IndexType *> > schwz::Communicate< ValueType, IndexType >::comm←
_struct::global_put
```

The array containing the number of elements that each subdomain sends from the other.

For example. `global_put[p][0]` contains the overall number of elements to be sent to subdomain `p` and `global_put[p][i]` contains the index of the solution vector to be sent to subdomain `p`.

Referenced by `schwz::SchwarzBase< ValueType, IndexType >::initialize()`, `schwz::SolverRAS< ValueType, IndexType >::setup_comm_buffers()`, and `schwz::SolverRAS< ValueType, IndexType >::setup_windows()`.

7.3.2.3 is_local_neighbor

```
template<typename ValueType , typename IndexType >
std::vector<bool> schwz::Communicate< ValueType, IndexType >::comm_struct::is_local_neighbor
```

The bool vector which is true if the neighbors of a subdomain are in one node.

Referenced by `schwz::SchwarzBase< ValueType, IndexType >::initialize()`, `schwz::SolverRAS< ValueType, IndexType >::setup_comm_buffers()`, and `schwz::SolverRAS< ValueType, IndexType >::setup_windows()`.

7.3.2.4 local_get

```
template<typename ValueType , typename IndexType >
std::shared_ptr<gko::Array<IndexType *> > schwz::Communicate< ValueType, IndexType >::comm←
_struct::local_get
```

The array containing the number of elements that each subdomain gets from the other.

For example. `local_get[p][0]` contains the overall number of elements to be received to subdomain `p` and `local←
_put[p][i]` contains the index of the solution vector to be received from subdomain `p`.

Referenced by `schwz::SolverRAS< ValueType, IndexType >::setup_comm_buffers()`, and `schwz::SolverRAS< ValueType, IndexType >::setup_windows()`.

7.3.2.5 local_put

```
template<typename ValueType , typename IndexType >
std::shared_ptr<gko::Array<IndexType *> > schwz::Communicate< ValueType, IndexType >::comm←
_struct::local_put
```

The array containing the number of elements that each subdomain sends from the other.

For example. `local_put[p][0]` contains the overall number of elements to be sent to subdomain `p` and `local←
_put[p][i]` contains the index of the solution vector to be sent to subdomain `p`.

Referenced by `schwz::SolverRAS< ValueType, IndexType >::setup_comm_buffers()`, and `schwz::SolverRAS< ValueType, IndexType >::setup_windows()`.

7.3.2.6 remote_get

```
template<typename ValueType , typename IndexType >
std::shared_ptr<gko::Array<IndexType *> > schwz::Communicate< ValueType, IndexType >::comm←
_struct::remote_get
```

The array containing the number of elements that each subdomain gets from the other.

For example. `global_get[p][0]` contains the overall number of elements to be received to subdomain `p` and `global←_put[p][i]` contains the index of the solution vector to be received from subdomain `p`.

Referenced by `schwz::SolverRAS< ValueType, IndexType >::setup_comm_buffers()`, and `schwz::SolverRAS< ValueType, IndexType >::setup_windows()`.

7.3.2.7 remote_put

```
template<typename ValueType , typename IndexType >
std::shared_ptr<gko::Array<IndexType *> > schwz::Communicate< ValueType, IndexType >::comm←
_struct::remote_put
```

The array containing the number of elements that each subdomain sends from the other.

For example. `global_put[p][0]` contains the overall number of elements to be sent to subdomain `p` and `global_put[p][i]` contains the index of the solution vector to be sent to subdomain `p`.

Referenced by `schwz::SolverRAS< ValueType, IndexType >::setup_comm_buffers()`, and `schwz::SolverRAS< ValueType, IndexType >::setup_windows()`.

The documentation for this struct was generated from the following file:

- `communicate.hpp` (96003b3)

7.4 schwz::Communicate< ValueType, IndexType > Class Template Reference

The communication class that provides the methods for the communication between the subdomains.

```
#include <communicate.hpp>
```

Classes

- struct `comm_struct`

The communication struct used to store the communication data.

Public Member Functions

- virtual void [setup_comm_buffers](#) ()=0
Sets up the communication buffers needed for the boundary exchange.
- virtual void [setup_windows](#) (const [Settings](#) &settings, const [Metadata](#)< ValueType, IndexType > &metadata, std::shared_ptr< gko::matrix::Dense< ValueType >> &main_buffer)=0
Sets up the windows needed for the asynchronous communication.
- virtual void [exchange_boundary](#) (const [Settings](#) &settings, const [Metadata](#)< ValueType, IndexType > &metadata, std::shared_ptr< gko::matrix::Dense< ValueType >> &global_solution)=0
Exchanges the elements of the solution vector.
- void [local_to_global_vector](#) (const [Settings](#) &settings, const [Metadata](#)< ValueType, IndexType > &metadata, const std::shared_ptr< gko::matrix::Dense< ValueType >> &local_vector, std::shared_ptr< gko::matrix::Dense< ValueType >> &global_vector)
Transforms data from a local vector to a global vector.
- virtual void [update_boundary](#) (const [Settings](#) &settings, const [Metadata](#)< ValueType, IndexType > &metadata, std::shared_ptr< gko::matrix::Dense< ValueType >> &local_solution, const std::shared_ptr< gko::matrix::Dense< ValueType >> &local_rhs, const std::shared_ptr< gko::matrix::Dense< ValueType >> &global_solution, const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &interface_matrix)=0
Update the values into local vector from obtained from the neighboring sub-domains using the interface matrix.
- void [clear](#) ([Settings](#) &settings)
Clears the data.

7.4.1 Detailed Description

```
template<typename ValueType, typename IndexType>
class schwz::Communicate< ValueType, IndexType >
```

The communication class that provides the methods for the communication between the subdomains.

Template Parameters

<i>ValueType</i>	The type of the floating point values.
<i>IndexType</i>	The type of the index type values.

Communicate

7.4.2 Member Function Documentation

7.4.2.1 exchange_boundary()

```
template<typename ValueType , typename IndexType >
void schwz::Communicate< ValueType, IndexType >::exchange_boundary (
    const Settings & settings,
    const Metadata< ValueType, IndexType > & metadata,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & global_solution ) [pure
virtual]
```

Exchanges the elements of the solution vector.

Parameters

<i>settings</i>	The settings struct.
<i>metadata</i>	The metadata struct.
<i>global_solution</i>	The solution vector being exchanged between the subdomains.

Implemented in [schwz::SolverRAS< ValueType, IndexType >](#).

Referenced by [schwz::SchwarzBase< ValueType, IndexType >::run\(\)](#).

7.4.2.2 local_to_global_vector()

```
template<typename ValueType , typename IndexType >
void schwz::Communicate< ValueType, IndexType >::local_to_global_vector (
    const Settings & settings,
    const Metadata< ValueType, IndexType > & metadata,
    const std::shared_ptr< gko::matrix::Dense< ValueType >> & local_vector,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & global_vector )
```

Transforms data from a local vector to a global vector.

Parameters

<i>settings</i>	The settings struct.
<i>metadata</i>	The metadata struct.
<i>local_vector</i>	The local vector in question.
<i>global_vector</i>	The global vector in question.

```
69 {
70     using vec = gko::matrix::Dense<ValueType>;
71     auto alpha = gko::initialize<gko::matrix::Dense<ValueType>>(
72         {1.0}, settings.executor);
73     auto temp_vector = vec::create(
74         settings.executor, gko::dim<2>(metadata.local_size, 1),
75         gko::Array<ValueType>::view(
76             settings.executor, metadata.local_size,
77             &global_vector->get_values()[metadata.first_row
78                 ->get_data()[metadata.my_rank]]),
79         1);
80
81     auto temp_vector2 = vec::create(
82         settings.executor, gko::dim<2>(metadata.local_size, 1),
83         gko::Array<ValueType>::view(settings.executor, metadata.local_size,
84             local_vector->get_values()),
85         1);
86     if (settings.convergence_settings.convergence_crit ==
87         Settings::convergence_settings::local_convergence_crit::
88             residual_based) {
89         local_vector->add_scaled(alpha.get(), temp_vector.get());
90         temp_vector->add_scaled(alpha.get(), local_vector.get());
91     } else {
92         temp_vector->copy_from(temp_vector2.get());
93     }
94 }
```

7.4.2.3 setup_windows()

```
template<typename ValueType , typename IndexType >
void schwz::Communicate< ValueType, IndexType >::setup_windows (
    const Settings & settings,
    const Metadata< ValueType, IndexType > & metadata,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & main_buffer ) [pure virtual]
```

Sets up the windows needed for the asynchronous communication.

Parameters

<i>settings</i>	The settings struct.
<i>metadata</i>	The metadata struct.
<i>main_buffer</i>	The main buffer being exchanged between the subdomains.

Implemented in [schwz::SolverRAS< ValueType, IndexType >](#).

Referenced by [schwz::SchwarzBase< ValueType, IndexType >::run\(\)](#).

7.4.2.4 update_boundary()

```
template<typename ValueType , typename IndexType >
void schwz::Communicate< ValueType, IndexType >::update_boundary (
    const Settings & settings,
    const Metadata< ValueType, IndexType > & metadata,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & local_solution,
    const std::shared_ptr< gko::matrix::Dense< ValueType >> & local_rhs,
    const std::shared_ptr< gko::matrix::Dense< ValueType >> & global_solution,
    const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & interface_↵
matrix ) [pure virtual]
```

Update the values into local vector from obtained from the neighboring sub-domains using the interface matrix.

Parameters

<i>settings</i>	The settings struct.
<i>metadata</i>	The metadata struct.
<i>local_solution</i>	The local solution vector in the subdomain.
<i>local_rhs</i>	The local right hand side vector in the subdomain.
<i>global_solution</i>	The workspace solution vector.
<i>global_old_solution</i>	The global solution vector of the previous iteration.
<i>interface_matrix</i>	The interface matrix containing the interface and the overlap data mainly used for exchanging values between different sub-domains.

7.6 CudaError Class Reference

[CudaError](#) is thrown when a CUDA routine throws a non-zero error code.

```
#include <exception.hpp>
```

Public Member Functions

- [CudaError](#) (const std::string &file, int line, const std::string &func, int error_code)
Initializes a CUDA error.

7.6.1 Detailed Description

[CudaError](#) is thrown when a CUDA routine throws a non-zero error code.

7.6.2 Constructor & Destructor Documentation

7.6.2.1 CudaError()

```
CudaError::CudaError (  
    const std::string & file,  
    int line,  
    const std::string & func,  
    int error_code ) [inline]
```

Initializes a CUDA error.

Parameters

<i>file</i>	The name of the offending source file
<i>line</i>	The source code line number where the error occurred
<i>func</i>	The name of the CUDA routine that failed
<i>error_code</i>	The resulting CUDA error code

```

137         : Error(file, line, func + ": " + get_error(error_code))
138     {}

```

The documentation for this class was generated from the following files:

7.7 CusparsedError Class Reference

[CusparsedError](#) is thrown when a cuSPARSE routine throws a non-zero error code.

```
#include <exception.hpp>
```

Public Member Functions

- [CusparsedError](#) (const std::string &file, int line, const std::string &func, int error_code)
Initializes a cuSPARSE error.

7.7.1 Detailed Description

[CusparsedError](#) is thrown when a cuSPARSE routine throws a non-zero error code.

7.7.2 Constructor & Destructor Documentation

7.7.2.1 CusparsedError()

```

CusparsedError::CusparsedError (
    const std::string & file,
    int line,
    const std::string & func,
    int error_code ) [inline]

```

Initializes a cuSPARSE error.

Parameters

<i>file</i>	The name of the offending source file
<i>line</i>	The source code line number where the error occurred
<i>func</i>	The name of the cuSPARSE routine that failed
<i>error_code</i>	The resulting cuSPARSE error code

```

159         : Error(file, line, func + ": " + get_error(error_code))
160     {}

```

The documentation for this class was generated from the following files:

- /home/runner/work/schwarz-lib/schwarz-lib/source/exception.cpp (96003b3)

7.8 schwz::device_guard Class Reference

This class defines a device guard for the cuda functions and the cuda module.

```
#include <device_guard.hpp>
```

7.8.1 Detailed Description

This class defines a device guard for the cuda functions and the cuda module.

The guard is used to make sure that the device code is run on the correct cuda device, when run with multiple devices. The class records the current device id and uses `cudaSetDevice` to set the device id to the one being passed in. After the scope has been exited, the destructor sets the `device_id` back to the one before entering the scope.

The documentation for this class was generated from the following file:

- device_guard.hpp (96003b3)

7.9 schwz::Initialize< ValueType, IndexType > Class Template Reference

The initialization class that provides methods for initialization of the solver.

```
#include <initialization.hpp>
```

Public Member Functions

- void [generate_rhs](#) (std::vector< ValueType > &rhs)
Generates the right hand side vector.
- void [setup_global_matrix](#) (const std::string &filename, const gko::size_type &[oned_laplacian_size](#), std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &global_matrix)
Generates the 2D global laplacian matrix.
- void [partition](#) (const [Settings](#) &settings, const [Metadata](#)< ValueType, IndexType > &metadata, const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &global_matrix, std::vector< unsigned int > &[partition_indices](#))
The partitioning function.
- void [setup_vectors](#) (const [Settings](#) &settings, const [Metadata](#)< ValueType, IndexType > &metadata, std::vector< ValueType > &rhs, std::shared_ptr< gko::matrix::Dense< ValueType >> &local_rhs, std::shared_ptr< gko::matrix::Dense< ValueType >> &global_rhs, std::shared_ptr< gko::matrix::Dense< ValueType >> &local_solution, std::shared_ptr< gko::matrix::Dense< ValueType >> &global_solution)
Setup the vectors with default values and allocate memory if not allocated.
- virtual void [setup_local_matrices](#) ([Settings](#) &settings, [Metadata](#)< ValueType, IndexType > &metadata, std::vector< unsigned int > &[partition_indices](#), std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &global_matrix, std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &local_matrix, std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &interface_matrix)=0
Sets up the local and the interface matrices from the global matrix and the partition indices.

Public Attributes

- std::vector< unsigned int > [partition_indices](#)
The partition indices containing the subdomains to which each row(vertex) of the matrix(graph) belongs to.
- std::vector< unsigned int > [cell_weights](#)
The cell weights for the partition algorithm.

Additional Inherited Members

7.9.1 Detailed Description

```
template<typename ValueType = gko::default_precision, typename IndexType = gko::int32>
class schwz::Initialize< ValueType, IndexType >
```

The initialization class that provides methods for initialization of the solver.

Template Parameters

<i>ValueType</i>	The type of the floating point values.
<i>IndexType</i>	The type of the index type values.

Initialization

7.9.2 Member Function Documentation

7.9.2.1 generate_rhs()

```
template<typename ValueType , typename IndexType >
void schwz::Initialize< ValueType, IndexType >::generate_rhs (
    std::vector< ValueType > & rhs )
```

Generates the right hand side vector.

Parameters

<i>rhs</i>	The rhs vector.
------------	-----------------

References `schwz::Initialize< ValueType, IndexType >::setup_global_matrix()`.

Referenced by `schwz::SchwarzBase< ValueType, IndexType >::initialize()`.

```
89 {
90     std::uniform_real_distribution<double> unif(0.0, 1.0);
91     std::default_random_engine engine;
92     for (gko::size_type i = 0; i < rhs.size(); ++i) {
93         rhs[i] = unif(engine);
94     }
95 }
```

7.9.2.2 partition()

```
template<typename ValueType , typename IndexType >
void schwz::Initialize< ValueType, IndexType >::partition (
    const Settings & settings,
    const Metadata< ValueType, IndexType > & metadata,
    const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & global_↵
matrix,
    std::vector< unsigned int > & partition_indices )
```

The partitioning function.

Allows the partition of the global matrix depending with METIS and a regular 1D decomposition.

Parameters

<i>settings</i>	The settings struct.
<i>metadata</i>	The metadata struct.
<i>global_matrix</i>	The global matrix.
<i>partition_indices</i>	The partition indices [OUTPUT].

References `schwz::Metadata< ValueType, IndexType >::global_size`, `schwz::Metadata< ValueType, IndexType >::my_rank`, `schwz::Metadata< ValueType, IndexType >::num_subdomains`, and `schwz::Settings::write_debug_↵` out.

Referenced by `schwz::SchwarzBase< ValueType, IndexType >::initialize()`.

```

283 {
284     partition_indices.resize(metadata.global_size);
285     if (metadata.my_rank == 0) {

```

7.9.2.4 setup_local_matrices()

```

template<typename ValueType , typename IndexType >
void schwz::Initialize< ValueType, IndexType >::setup_local_matrices (

```

```

    Settings & settings,
    Metadata< ValueType, IndexType > & metadata,
    std::vector< unsigned int > & partition_indices,
    std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & global_matrix,
    std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & local_matrix,
    std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & interface_matrix )
[pure virtual]

```

Sets up the local and the interface matrices from the global matrix and the partition indices.

Parameters

<i>settings</i>	The settings struct.
<i>metadata</i>	The metadata struct.
<i>partition_indices</i>	The array containing the partition indices.
<i>global_matrix</i>	The global system matrix.
<i>local_matrix</i>	The local system matrix.
<i>interface_matrix</i>	The interface matrix containing the interface and the overlap data mainly used for exchanging values between different sub-domains.
<i>local_perm</i>	The local permutation, obtained through RCM or METIS.

Implemented in [schwz::SolverRAS< ValueType, IndexType >](#).

Referenced by [schwz::SchwarzBase< ValueType, IndexType >::initialize\(\)](#).

7.9.2.5 setup_vectors()

```

template<typename ValueType , typename IndexType >
void schwz::Initialize< ValueType, IndexType >::setup_vectors (
    const Settings & settings,
    const Metadata< ValueType, IndexType > & metadata,
    std::vector< ValueType > & rhs,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & local_rhs,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & global_rhs,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & local_solution,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & global_solution )

```

Setup the vectors with default values and allocate mameory if not allocated.

Parameters

<i>settings</i>	The settings struct.
<i>metadata</i>	The metadata struct.
<i>local_rhs</i>	The local right hand side vector in the subdomain.
<i>global_rhs</i>	The global right hand side vector.
<i>local_solution</i>	The local solution vector in the subdomain.
<i>global_solution</i>	The global solution vector.

7.10 schwz::Metadata< ValueType, IndexType > Struct Template Reference

The solver metadata struct.

```
#include <settings.hpp>
```

Public Attributes

- MPI_Comm [mpi_communicator](#)
The MPI communicator.
- gko::size_type [global_size](#) = 0
The size of the global matrix.
- gko::size_type [oned_laplacian_size](#) = 0
The size of the 1 dimensional laplacian grid.
- gko::size_type [local_size](#) = 0
The size of the local subdomain matrix.
- gko::size_type [local_size_x](#) = 0
The size of the local subdomain matrix + the overlap.
- gko::size_type [local_size_o](#) = 0
The size of the local subdomain matrix + the overlap.
- gko::size_type [overlap_size](#) = 0
The size of the overlap between the subdomains.
- gko::size_type [num_subdomains](#) = 1
The number of subdomains used within the solver.

- int [my_rank](#)
The rank of the subdomain.
- int [my_local_rank](#)
The local rank of the subdomain.
- int [local_num_procs](#)
The local number of procs in the subdomain.
- int [comm_size](#)
The number of subdomains used within the solver, size of the communicator.
- int [num_threads](#)
The number of threads used within the solver for each subdomain.
- IndexType [iter_count](#)
The iteration count of the solver.
- ValueType [tolerance](#)
The tolerance of the complete solver.
- ValueType [local_solver_tolerance](#)
The tolerance of the local solver in case of an iterative solve.
- IndexType [max_iters](#)
The maximum iteration count of the solver.
- unsigned int [precond_max_block_size](#)
The maximum block size for the preconditioner.
- ValueType [current_residual_norm](#) = -1.0
The current residual norm of the subdomain.
- ValueType [min_residual_norm](#) = -1.0
The minimum residual norm of the subdomain.
- std::vector< std::tuple< int, int, int, std::string, std::vector< ValueType > > > [time_struct](#)
The struct used to measure the timings of each function within the solver loop.
- std::vector< std::tuple< int, std::vector< std::tuple< int, int > >, std::vector< std::tuple< int, int > >, int, int > > [comm_data_struct](#)
The struct used to measure the timings of each function within the solver loop.
- std::shared_ptr< gko::Array< IndexType > > [global_to_local](#)
The mapping containing the global to local indices.
- std::shared_ptr< gko::Array< IndexType > > [local_to_global](#)
The mapping containing the local to global indices.
- std::shared_ptr< gko::Array< IndexType > > [overlap_row](#)
The overlap row indices.
- std::shared_ptr< gko::Array< IndexType > > [first_row](#)
The starting row of each subdomain in the matrix.
- std::shared_ptr< gko::Array< IndexType > > [permutation](#)
The permutation used for the re-ordering.
- std::shared_ptr< gko::Array< IndexType > > [i_permutation](#)
The inverse permutation used for the re-ordering.

7.10.1 Detailed Description

```
template<typename ValueType, typename IndexType>
struct schwz::Metadata< ValueType, IndexType >
```

The solver metadata struct.

Template Parameters

<i>ValueType</i>	The type of the floating point values.
<i>IndexType</i>	The type of the index type values.

7.10.2 Member Data Documentation

7.10.2.1 local_solver_tolerance

```
template<typename ValueType, typename IndexType>
ValueType schwz::Metadata< ValueType, IndexType >::local_solver_tolerance
```

The tolerance of the local solver in case of an iterative solve.

The residual norm reduction required.

7.10.2.2 tolerance

```
template<typename ValueType, typename IndexType>
ValueType schwz::Metadata< ValueType, IndexType >::tolerance
```

The tolerance of the complete solver.

The residual norm reduction required.

The documentation for this struct was generated from the following file:

- settings.hpp (96003b3)

7.11 MetisError Class Reference

[MetisError](#) is thrown when a METIS routine throws a non-zero error code.

```
#include <exception.hpp>
```

Public Member Functions

- [MetisError](#) (const std::string &file, int line, const std::string &func, int error_code)
Initializes a METIS error.

7.11.1 Detailed Description

[MetisError](#) is thrown when a METIS routine throws a non-zero error code.

7.11.2 Constructor & Destructor Documentation

7.11.2.1 MetisError()

```
MetisError::MetisError (
    const std::string & file,
    int line,
    const std::string & func,
    int error_code ) [inline]
```

Initializes a METIS error.

Parameters

<i>file</i>	The name of the offending source file
<i>line</i>	The source code line number where the error occurred
<i>func</i>	The name of the METIS routine that failed
<i>error_code</i>	The resulting METIS error code

```
182         : Error(file, line, func + ": " + get_error(error_code))
183     {}
```

7.12 schwz::SchwarzBase< ValueType, IndexType > Class Template Reference

The Base solver class is meant to be the class implementing the common implementations for all the schwarz methods.

```
#include <schwarz_base.hpp>
```

Public Member Functions

- [SchwarzBase](#) ([Settings](#) &settings, [Metadata](#)< ValueType, IndexType > &metadata)
The constructor that takes in the user settings and a metadata struct containing the solver metadata.
- void [initialize](#) ()
Initialize the matrix and vectors.
- void [run](#) (std::shared_ptr< gko::matrix::Dense< ValueType >> &solution)
The function that runs the actual solver and obtains the final solution.
- void [print_vector](#) (const std::shared_ptr< gko::matrix::Dense< ValueType >> &vector, int subd, std::string name)
The auxiliary function that prints a passed in vector.
- void [print_matrix](#) (const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &matrix, int rank, std::string name)
The auxiliary function that prints a passed in CSR matrix.

Public Attributes

- `std::shared_ptr< gko::matrix::Csr< ValueType, IndexType > >` [local_matrix](#)
The local subdomain matrix.
- `std::shared_ptr< gko::matrix::Permutation< IndexType > >` [local_perm](#)
The local subdomain permutation matrix/array.
- `std::shared_ptr< gko::matrix::Permutation< IndexType > >` [local_inv_perm](#)
The local subdomain inverse permutation matrix/array.
- `std::shared_ptr< gko::matrix::Csr< ValueType, IndexType > >` [triangular_factor_l](#)
The local lower triangular factor used for the triangular solves.
- `std::shared_ptr< gko::matrix::Csr< ValueType, IndexType > >` [triangular_factor_u](#)
The local upper triangular factor used for the triangular solves.
- `std::shared_ptr< gko::matrix::Csr< ValueType, IndexType > >` [interface_matrix](#)
The local interface matrix.
- `std::shared_ptr< gko::matrix::Csr< ValueType, IndexType > >` [global_matrix](#)
The global matrix.
- `std::shared_ptr< gko::matrix::Dense< ValueType > >` [local_rhs](#)
The local right hand side.
- `std::shared_ptr< gko::matrix::Dense< ValueType > >` [global_rhs](#)
The global right hand side.
- `std::shared_ptr< gko::matrix::Dense< ValueType > >` [local_solution](#)
The local solution vector.
- `std::shared_ptr< gko::matrix::Dense< ValueType > >` [global_solution](#)
The global solution vector.

Additional Inherited Members

7.12.1 Detailed Description

```
template<typename ValueType = gko::default_precision, typename IndexType = gko::int32>
class schwz::SchwarzBase< ValueType, IndexType >
```

The Base solver class is meant to be the class implementing the common implementations for all the schwarz methods.

It derives from the Initialization class, the Communication class and the [Solve](#) class all of which are templated.

Template Parameters

<i>ValueType</i>	The type of the floating point values.
<i>IndexType</i>	The type of the index type values.

7.12.2 Constructor & Destructor Documentation

7.12.2.1 SchwarzBase()

```
template<typename ValueType , typename IndexType >
schwz::SchwarzBase< ValueType, IndexType >::SchwarzBase (
    Settings & settings,
    Metadata< ValueType, IndexType > & metadata )
```

The constructor that takes in the user settings and a metadata struct containing the solver metadata.

Parameters

<i>settings</i>	The settings struct.
<i>metadata</i>	The metadata struct.

References schwz::Settings::cuda_device_guard, schwz::Settings::executor, schwz::Settings::executor_string, schwz::Metadata< ValueType, IndexType >::local_num_procs, schwz::Metadata< ValueType, IndexType >::mpi_communicator, schwz::Metadata< ValueType, IndexType >::my_local_rank, and schwz::Metadata< ValueType, IndexType >::my_rank.

```
50 : Initialize<ValueType, IndexType>(settings, metadata),
51 settings(settings),
52 metadata(metadata)
53 {
54     using vec_itype = gko::Array<IndexType>;
55     using vec_vecshared = gko::Array<IndexType *>;

95         ->get_exec_info();
96     exec_info->bind_to_core(my_local_rank);
97 }
98 }
99 }
```

7.12.3 Member Function Documentation

7.12.3.1 print_matrix()

```
template<typename ValueType = gko::default_precision, typename IndexType = gko::int32>
void schwz::SchwarzBase< ValueType, IndexType >::print_matrix (
    const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & matrix,
    int rank,
    std::string name )
```

The auxiliary function that prints a passed in CSR matrix.

Parameters

<i>matrix</i>	The matrix to be printed.
<i>subd</i>	The subdomain on which the vector exists.
<i>name</i>	The name of the matrix as a string.

7.12.3.2 print_vector()

```
template<typename ValueType = gko::default_precision, typename IndexType = gko::int32>
void schwz::SchwarzBase< ValueType, IndexType >::print_vector (
    const std::shared_ptr< gko::matrix::Dense< ValueType >> & vector,
    int subd,
    std::string name )
```

The auxiliary function that prints a passed in vector.

Parameters

<i>vector</i>	The vector to be printed.
<i>subd</i>	The subdomain on which the vector exists.
<i>name</i>	The name of the vector as a string.

7.12.3.3 run()

```
template<typename ValueType , typename IndexType >
void schwz::SchwarzBase< ValueType, IndexType >::run (
    std::shared_ptr< gko::matrix::Dense< ValueType >> & solution )
```

The function that runs the actual solver and obtains the final solution.

Parameters

<i>solution</i>	The solution vector.

7.13 schwz::Settings Struct Reference

The struct that contains the solver settings and the parameters to be set by the user.

```
#include <settings.hpp>
```

Classes

- struct [comm_settings](#)
The settings for the various available communication paradigms.
- struct [convergence_settings](#)
The various convergence settings available.

Public Types

- enum [partition_settings](#)
The partition algorithm to be used for partitioning the matrix.
- enum [local_solver_settings](#)
The local solver algorithm for the local subdomain solves.

Public Attributes

- std::string [executor_string](#)
The string that contains the ginkgo executor paradigm.
- std::shared_ptr< gko::Executor > [executor](#) = gko::ReferenceExecutor::create()
The ginkgo executor the code is to be executed on.
- std::shared_ptr< [device_guard](#) > [cuda_device_guard](#)
The ginkgo executor the code is to be executed on.
- gko::int32 [overlap](#) = 2
The overlap between the subdomains.
- std::string [matrix_filename](#) = "null"
The string that contains the matrix file name to read from .
- bool [explicit_laplacian](#) = true
Flag if the laplacian matrix should be generated within the library.
- bool [enable_random_rhs](#) = false
Flag to enable a random rhs.
- bool [print_matrices](#) = false
Flag to enable printing of matrices.
- bool [debug_print](#) = false
Flag to enable some debug printing.
- bool [naturally_ordered_factor](#) = false
Disables the re-ordering of the matrix before computing the triangular factors during the CHOLMOD factorization.
- std::string [metis_objtype](#)
This setting defines the objective type for the metis partitioning.
- bool [use_precond](#) = false
Enable the block jacobi local preconditioner for the local solver.
- bool [write_debug_out](#) = false
Enable the writing of debug out to file.
- bool [write_perm_data](#) = false
Enable the local permutations from CHOLMOD to a file.
- int [shifted_iter](#) = 1
Iteration shift for node local communication.
- std::string [factorization](#) = "cholmod"
The factorization for the local direct solver.
- std::string [reorder](#)
The reordering for the local solve.

7.13.1 Detailed Description

The struct that contains the solver settings and the parameters to be set by the user.

settings

7.13.2 Member Data Documentation

7.13.2.1 explicit_laplacian

```
bool schwz::Settings::explicit_laplacian = true
```

Flag if the laplacian matrix should be generated within the library.

If false, an external matrix and rhs needs to be provided

Referenced by `schwz::SchwarzBase< ValueType, IndexType >::initialize()`.

7.13.2.2 naturally_ordered_factor

```
bool schwz::Settings::naturally_ordered_factor = false
```

Disables the re-ordering of the matrix before computing the triangular factors during the CHOLMOD factorization.

Note

This is mainly to allow compatibility with GPU solution.

The documentation for this struct was generated from the following file:

- settings.hpp (96003b3)

7.14 schwz::Solve< ValueType, IndexType > Class Template Reference

The Solver class the provides the solver and the convergence checking methods.

```
#include <solve.hpp>
```

Additional Inherited Members

7.14.1 Detailed Description

```
template<typename ValueType = gko::default_precision, typename IndexType = gko::int32>
class schwz::Solve< ValueType, IndexType >
```

The Solver class the provides the solver and the convergence checking methods.

Template Parameters

<i>ValueType</i>	The type of the floating point values.
<i>IndexType</i>	The type of the index type values.

Solve

The documentation for this class was generated from the following files:

- solve.hpp (96003b3)
- /home/runner/work/schwarz-lib/schwarz-lib/source/solve.cpp (96003b3)

7.15 schwz::SolverRAS< ValueType, IndexType > Class Template Reference

An implementation of the solver interface using the RAS solver.

```
#include <restricted_schwarz.hpp>
```

Public Member Functions

- [SolverRAS](#) ([Settings](#) &settings, [Metadata](#)< ValueType, IndexType > &metadata)
The constructor that takes in the user settings and a metadata struct containing the solver metadata.
- void [setup_local_matrices](#) ([Settings](#) &settings, [Metadata](#)< ValueType, IndexType > &metadata, std::vector< unsigned int > &[partition_indices](#), std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &[global_matrix](#), std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &[local_matrix](#), std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &[interface_matrix](#)) override
Sets up the local and the interface matrices from the global matrix and the partition indices.
- void [setup_comm_buffers](#) () override
Sets up the communication buffers needed for the boundary exchange.
- void [setup_windows](#) (const [Settings](#) &settings, const [Metadata](#)< ValueType, IndexType > &metadata, std::shared_ptr< gko::matrix::Dense< ValueType >> &[main_buffer](#)) override
Sets up the windows needed for the asynchronous communication.
- void [exchange_boundary](#) (const [Settings](#) &settings, const [Metadata](#)< ValueType, IndexType > &metadata, std::shared_ptr< gko::matrix::Dense< ValueType >> &[global_solution](#)) override
Exchanges the elements of the solution vector.
- void [update_boundary](#) (const [Settings](#) &settings, const [Metadata](#)< ValueType, IndexType > &metadata, std::shared_ptr< gko::matrix::Dense< ValueType >> &[local_solution](#), const std::shared_ptr< gko::matrix::Dense< ValueType >> &[local_rhs](#), const std::shared_ptr< gko::matrix::Dense< ValueType >> &[global_solution](#), const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &[interface_matrix](#)) override
Update the values into local vector from obtained from the neighboring sub-domains using the interface matrix.

Additional Inherited Members

7.15.1 Detailed Description

```
template<typename ValueType = gko::default_precision, typename IndexType = gko::int32>
class schwz::SolverRAS< ValueType, IndexType >
```

An implementation of the solver interface using the RAS solver.

Template Parameters

<i>ValueType</i>	The type of the floating point values.
<i>IndexType</i>	The type of the index type values.

7.15.2 Constructor & Destructor Documentation

7.15.2.1 SolverRAS()

```
template<typename ValueType , typename IndexType >
schwz::SolverRAS< ValueType, IndexType >::SolverRAS (
    Settings & settings,
    Metadata< ValueType, IndexType > & metadata )
```

The constructor that takes in the user settings and a metadata struct containing the solver metadata.

Parameters

<i>settings</i>	The settings struct.
<i>metadata</i>	The metadata struct.
<i>data</i>	The additional data struct.

```
50      : SchwarzBase<ValueType, IndexType>(settings, metadata)
51 {}
```

7.15.3 Member Function Documentation

7.15.3.1 exchange_boundary()

```
template<typename ValueType , typename IndexType >
void schwz::SolverRAS< ValueType, IndexType >::exchange_boundary (
    const Settings & settings,
    const Metadata< ValueType, IndexType > & metadata,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & global_solution ) [override],
[virtual]
```

Exchanges the elements of the solution vector.

Parameters

<i>settings</i>	The settings struct.
<i>metadata</i>	The metadata struct.
<i>global_solution</i>	The solution vector being exchanged between the subdomains.

Implements [schwz::Communicate< ValueType, IndexType >](#).

References [schwz::Settings::comm_settings::enable_onesided](#), and [schwz::SchwarzBase< ValueType, IndexType >::global_solution](#).

```

798 {
799     if (settings.comm_settings.enable_onesided) {
800         exchange_boundary_onesided<ValueType, IndexType>(
801             settings, metadata, this->comm_struct, global\_solution);
802     } else {
803         exchange_boundary_twosided<ValueType, IndexType>(
804             settings, metadata, this->comm_struct, global\_solution);
805     }
806 }
```

7.15.3.2 setup_local_matrices()

```

template<typename ValueType , typename IndexType >
void schwz::SolverRAS< ValueType, IndexType >::setup\_local\_matrices (
    Settings & settings,
    Metadata< ValueType, IndexType > & metadata,
    std::vector< unsigned int > & partition_indices,
    std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & global_matrix,
    std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & local_matrix,
    std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & interface_matrix )
[override], [virtual]
```

Sets up the local and the interface matrices from the global matrix and the partition indices.

Parameters

<i>settings</i>	The settings struct.
<i>metadata</i>	The metadata struct.
<i>partition_indices</i>	The array containing the partition indices.
<i>global_matrix</i>	The global system matrix.
<i>local_matrix</i>	The local system matrix.
<i>interface_matrix</i>	The interface matrix containing the interface and the overlap data mainly used for exchanging values between different sub-domains.
<i>local_perm</i>	The local permutation, obtained through RCM or METIS.

Implements [schwz::Initialize< ValueType, IndexType >](#).

```

7.15.3.3 setup_windows()

```

template<typename ValueType , typename IndexType >
void schwz::SolverRAS< ValueType, IndexType >::setup_windows (
    const Settings & settings,

```

```
const Metadata< ValueType, IndexType > & metadata,
std::shared_ptr< gko::matrix::Dense< ValueType >> & main_buffer ) [override],
[virtual]
```

Sets up the windows needed for the asynchronous communication.

Parameters

<i>settings</i>	The settings struct.
<i>metadata</i>	The metadata struct.
<i>main_buffer</i>	The main buffer being exchanged between the subdomains.

Implements [schwz::Communicate< ValueType, IndexType >](#).

    const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & interface_←
matrix ) [override], [virtual]

```

Update the values into local vector from obtained from the neighboring sub-domains using the interface matrix.

Parameters

<i>settings</i>	The settings struct.
<i>metadata</i>	The metadata struct.
<i>local_solution</i>	The local solution vector in the subdomain.
<i>local_rhs</i>	The local right hand side vector in the subdomain.
<i>global_solution</i>	The workspace solution vector.
<i>global_old_solution</i>	The global solution vector of the previous iteration.
<i>interface_matrix</i>	The interface matrix containing the interface and the overlap data mainly used for exchanging values between different sub-domains.

7.16 UmfpackError Class Reference

[UmfpackError](#) is thrown when a METIS routine throws a non-zero error code.

```
#include <exception.hpp>
```

Public Member Functions

- [UmfpackError](#) (const std::string &file, int line, const std::string &func, int error_code)
Initializes a METIS error.

7.16.1 Detailed Description

[UmfpackError](#) is thrown when a METIS routine throws a non-zero error code.

7.16.2 Constructor & Destructor Documentation

7.16.2.1 UmfpackError()

```
UmfpackError::UmfpackError (
    const std::string & file,
    int line,
    const std::string & func,
    int error_code ) [inline]
```

Initializes a METIS error.

Parameters

<i>file</i>	The name of the offending source file
<i>line</i>	The source code line number where the error occurred
<i>func</i>	The name of the METIS routine that failed
<i>error_code</i>	The resulting METIS error code

```
205         : Error(file, line, func + ": " + get_error(error_code))
206     {}
```

The documentation for this class was generated from the following files:

7.17 schwz::Utils< ValueType, IndexType > Struct Template Reference

The utilities class which provides some checks and basic utilities.

```
#include <utils.hpp>
```

7.17.1 Detailed Description

```
template<typename ValueType = gko::default_precision, typename IndexType = gko::int32>  
struct schwz::Utils< ValueType, IndexType >
```

The utilities class which provides some checks and basic utilities.

Template Parameters

<i>ValueType</i>	The type of the floating point values.
<i>IndexType</i>	The type of the index type values.

Utils

The documentation for this struct was generated from the following files:

- `utils.hpp` (96003b3)
- `/home/runner/work/schwarz-lib/schwarz-lib/source/utils.cpp` (96003b3)
