Chapter 1

Main Page

This is the main page for the Schwarz library pdf documentation. The repository is hosted on [github](#). Documentation on aspects such as the build system, can be found at the [# Installation Instructions](#) page.

Modules

The structure of the Schwarz Library code is divided into different [modules](#) :

- [Initialization](#) : Handles the initialization of the problem and the solver.
- [Communicate](#) : Handles the communication.
- [Solve](#) : Handles the local solution and the convergence detection.
- [Schwarz Class](#) : The Classes related to the Schwarz solvers.
- [Utils](#) : Provides some basic utilities.

Chapter 2

Installation Instructions

Building

Use the standard cmake build procedure:

```
mkdir build; cd build
cmake -G "Unix Makefiles" [OPTIONS] .. && make
```

Replace [OPTIONS] with desired cmake options for your build. The library adds the following additional switches to control what is being built:

- `-DSCHWARZ_BUILD_BENCHMARKING={ON, OFF}` Builds some example benchmarks. Default is ON
- `-DSCHWARZ_BUILD_METIS={ON, OFF}` Builds with support for the METIS partitioner. User needs to provide the path to the installation of the METIS library in `METIS_DIR`, preferably as an environment variable. Default is OFF
- `-DSCHWARZ_BUILD_CHOLMOD={ON, OFF}` Builds with support for the CHOLMOD module from the Suitesparse library. User needs to set an environment variable `CHOLMOD_DIR` to the path containing the CHOLMOD installation. Default is OFF
- `-DSCHWARZ_BUILD_CUDA={ON, OFF}` Builds with CUDA support. Though Ginkgo provides most of the required CUDA support, we do need to link to CUDA for explicit setting of GPU affinities, some custom gather and scatter operations. Default is OFF.
- `-DSCHWARZ_BUILD_CLANG_TIDY={ON, OFF}` Builds with support for clang-tidy Default is OFF
- `-DSCHWARZ_BUILD DEAL_II={ON, OFF}` Builds with support for the finite element library `deal.ii` Default is OFF
- `-DSCHWARZ_WITH_HWLOC={ON, OFF}` Builds with support for the hardware locality library used for binding hardware. `hwloc` is distributed as a part of the Open-MPI project. Default is ON
- `-DSCHWARZ_DEVEL_TOOLS={ON, OFF}` Builds with some developer tools support. Default is ON. In particular uses `git-cmake-format` to automatically format the source files with `clang-format`.

Tips

- If you are having CUDA problems and you are not using CUDA, then feel free to switch the CUDA module off with `-DSCHWARZ_BUILD_CUDA=off`.
- Installing CHOLMOD can be a bit annoying. TODO add some details on fixing Suitesparse compilation.
- When doing merge commits it is possible that make format does not work. You can run `cmake -DSCHWARZ_DEVEL_TOOLS=OFF ..` to temporarily switch off the formatting. Please switch it on again when committing normally.

Chapter 3

Testing Instructions

Chapter 4

Benchmarking.

The flag `-DSCHWARZ_BUILD_BENCHMARKING` (default ON) enables the examples and benchmarking snippets.

If `schwarz-lib` has been built with `deal.ii`, then the `deal.ii` examples, `ex_6` and `ex_9` are also built, else only the `bench_ras` example is built. The following command line options are available for this example. This is setup using `gflags`.

The executable is run in the following fashion:

```
[MPI_COMMAND] [MPI_OPTIONS] PATH_TO_EXECUTABLE [FLAGS]
```

Where `FLAGS` are the options below with the template `flag_name [type] [default_value]`. For example, to set the number of iterations of the RAS solver to 100 one would add `--num_iters=100` to the executable command above.

Generic settings

- `executor [std::string][reference]` : The executor used to run the solver, one of `reference`, `cuda` or `omp`.
- `explicit_laplacian [bool][false]` : Use the explicit laplacian instead of `deal.ii`'s matrix.
- `set_1d_laplacian_size [uint32][16]` : The number of grid points in one dimension for the 2D laplacian problem.
- `enable_random_rhs [bool][false]` : Use a random rhs instead of the default 1.0's .
- `overlap [uint32][2]` : Overlap between the domains.
- `timings_file [std::string][null]` : The filename for the timings.
- `partition [std::string][regular]` : The partitioner used. The choices are `metis`, `regular` or `regular2d`.
- `metis_objtype [std::string][null]` : The objective type to minimize for the metis partitioner. The choices are `edgcut` and `totalvol`.
- `num_threads [uint32][1]` : Number of threads to bind to a process.
- `non_symmetric_matrix [bool][false]` : Explicitly state that the matrix is non-symmetric so that the local GMRES solver is used.
- `use_mixed_precision [bool][false]` : Use mixed precision in the communication.

Input settings

- `matrix_filename` [std::string][null] : The matrix file to read the global system matrix from.

Output settings

- `enable_debug_write` [bool][false] : Enable some debugging outputs to stdout.
- `write_comm_data` [bool][false] : Write the number of sends and recvs of each subdomain to files.
- `write_perm_data` [bool][false] : Write the permutation data from CHOLMOD to a file.
- `print_config` [bool][true] : Print the configuration of the run.
- `print_matrices` [bool][false] : Print the local system matrices to a file.
- `debug` [bool][false] : Enable some possible expensive debug checks.
- `enable_logging` [bool][false] : Enable some possible expensive logging from Ginkgo.

Solver settings**Generic settings**

- `num_iters` [uint32][100] : The number of outer iterations for the RAS solver.
- `set_tol` [double][1e-6] : The Outer tolerance for the RAS solver.
- `local_tol` [double][1e-12] : The Inner tolerance for the local iterative solver.

Communication settings

- `enable_onesided` [bool][false] : Enable the onesided asynchronous communication.
- `enable_twosided` [bool][true] : Enable the twosided asynchronous communication. A dummy flag.
- `enable_one_by_one` [bool][false] : Enable putting/getting of each element in onesided communication.
- `enable_put_all_local_residual_norms` [bool][false] : Enable putting of all local residual norms"
- `enable_comm_overlap` [bool][false] : Enable overlap of communication and computation.
- `flush_type` [std::string][flush-all] : The window flush strategy. The choices are `flush-local` and `flush-all`.
- `lock_type` [std::string][lock-all] : The window lock strategy. The choices are `lock-local` and `lock-all`.
- `remote_comm_type` [std::string][get] : The type of the remote communication. `get` uses `MPI_Get` and `put` uses `MPI_Put`.

Convergence settings

- `enable_global_check` [bool][false] : Use the global convergence check for twosided.
- `global_convergence_type` [std::string][centralized-tree] : Choose the convergence detection algorithm for onesided.
- `enable_decentralized_accumulate` [bool][false] : Use accumulate strategy for decentralized convergence check..
- `enable_global_check_iter_offset` [bool][false] : Enable global convergence check only after a certain number of iterations.

Local solver settings

- `local_solver` [std::string][iterative-ginkgo] : The local solver used in the local domains. The current choices are `direct-cholmod`, `direct-ginkgo` or `iterative-ginkgo`.
- `local_factorization` [std::string][cholmod] : The factorization for the local direct solver "cholmod" or "umfpack".
- `local_reordering` [std::string][none] : The reordering for the local direct solver "none", "metis_reordering" or "rcm_reordering".
- `factor_ordering_natural` [bool][false] : If true uses natural ordering instead of the default optimized ordering. This is needed for CUDA runs as the factorization ordering needs to be given to the solver.
- `enable_local_precond` [bool][false] : If true uses the Block jacobi preconditioning for the local iterative solver.
- `precond_max_block_size` [uint32][16] : Maximum size of the blocks for the block jacobi preconditioner
- `shifted_iter` [uint32][1] : The number of iterations to communicate for the local subdomains.
- `local_max_iters` [int32][-1] : The maximum number of iterations for the local iterative solver.
- `restart_iter` [uint32][1] : The restart iter for the GMRES solver.
- `reset_local_crit_iter` [int32][-1] : The RAS iteration to reset the local iteration count.

Poisson solver using Restricted Additive Schwarz with overlap.

This example runs is written within the `benchmarking/bench_ras.cpp` file. This demonstrates the basic capabilities of `schwarz-lib`. You can use it to solve the 2D Poisson equation with a 5 point stencil or solve a generic matrix by providing it a matrix file.

Examples with deal.ii

These examples use `deal.ii`'s capabilities to generate a matrix and solution is computed with the RAS method.

Possible settings are:

- `num_refine_cycles` [uint32][1][disabled] : The number of refinement cycles when used with `deal.ii`.
- `init_refine_level` [uint32][4] : The initial refinement level of the problem. This sets the initial number of dof's.
- `dealii_orig` [bool][false] : Solve with the `deal.ii` iterative CG instead of the RAS solver.
- `vis_sol` [bool][false] : Print the solution for visualization.

Solving the n-dimensional Poisson equation with FEM.

The `benchmarking/dealii_ex_6.cpp` demonstrates the solution of the Poisson equation with adaptive refinement as explained on the [deal.ii example documentation page](#)

Solving the Advection equation with FEM.

The `benchmarking/dealii_ex_9.cpp` demonstrates the solution of the Advection equation with adaptive refinement as explained on the [deal.ii example documentation page](#)

Chapter 5

Module Documentation

5.1 Communicate

A module dedicated to the Communication interface in schwarz-lib.

Namespaces

- [schwz::CommHelpers](#)
The CommHelper namespace .
- [schwz::EventHelpers](#)
The EventHelper namespace .
- [ProcessTopology](#)
The ProcessTopology namespace .

Classes

- class [schwz::Communicate< ValueType, IndexType, MixedValueType >](#)
The communication class that provides the methods for the communication between the subdomains.
- struct [schwz::Metadata< ValueType, IndexType >](#)
The solver metadata struct.

5.1.1 Detailed Description

A module dedicated to the Communication interface in schwarz-lib.

5.2 Initialization

A module dedicated to the initialization and setup and usage of the solvers in schwarz-lib.

Namespaces

- [schwz::PartitionTools](#)
The [PartitionTools](#) namespace .
- [ProcessTopology](#)
The [ProcessTopology](#) namespace .

Classes

- class [schwz::device_guard](#)
This class defines a device guard for the cuda functions and the cuda module.
- class [schwz::Initialize< ValueType, IndexType >](#)
The initialization class that provides methods for initialization of the solver.
- struct [schwz::Settings](#)
The struct that contains the solver settings and the parameters to be set by the user.
- struct [schwz::Metadata< ValueType, IndexType >](#)
The solver metadata struct.

5.2.1 Detailed Description

A module dedicated to the initialization and setup and usage of the solvers in schwarz-lib.

5.3 Schwarz Class

A module dedicated to the Schwarz solver classes in schwarz-lib.

Classes

- class [schwz::SolverRAS< ValueType, IndexType, MixedValueType >](#)
An implementation of the solver interface using the RAS solver.
- class [schwz::SchwarzBase< ValueType, IndexType, MixedValueType >](#)
The Base solver class is meant to be the class implementing the common implementations for all the schwarz methods.

5.3.1 Detailed Description

A module dedicated to the Schwarz solver classes in schwarz-lib.

5.4 Solve

A module dedicated to the solvers including local solution and convergence detection in schwarz-lib.

Namespaces

- [schwz::conv_tools](#)
The [conv_tools](#) namespace .
- [schwz::SolverTools](#)
The [SolverTools](#) namespace .

Classes

- struct [schwz::Metadata](#)< [ValueType](#), [IndexType](#) >
The solver metadata struct.
- class [schwz::Solve](#)< [ValueType](#), [IndexType](#), [MixedValueType](#) >
The Solver class the provides the solver and the convergence checking methods.

5.4.1 Detailed Description

A module dedicated to the solvers including local solution and convergence detection in schwarz-lib.

5.5 Utils

A module dedicated to the utilities in schwarz-lib.

Classes

- struct `schwz::Utils< ValueType, IndexType >`
The utilities class which provides some checks and basic utilities.

5.5.1 Detailed Description

A module dedicated to the utilities in schwarz-lib.

Chapter 6

Namespace Documentation

6.1 ProcessTopology Namespace Reference

The [ProcessTopology](#) namespace .

6.1.1 Detailed Description

The [ProcessTopology](#) namespace .

proc_topo

6.2 schwz Namespace Reference

The Schwarz wrappers namespace.

Namespaces

- [CommHelpers](#)
The CommHelper namespace .
- [conv_tools](#)
The [conv_tools](#) namespace .
- [EventHelpers](#)
The EventHelper namespace .
- [PartitionTools](#)
The [PartitionTools](#) namespace .
- [SolverTools](#)
The [SolverTools](#) namespace .

Classes

- class [Communicate](#)
The communication class that provides the methods for the communication between the subdomains.
- class [device_guard](#)
This class defines a device guard for the cuda functions and the cuda module.
- class [Initialize](#)
The initialization class that provides methods for initialization of the solver.
- struct [Metadata](#)
The solver metadata struct.
- class [SchwarzBase](#)
The Base solver class is meant to be the class implementing the common implementations for all the schwarz methods.
- struct [Settings](#)
The struct that contains the solver settings and the parameters to be set by the user.
- class [Solve](#)
The Solver class the provides the solver and the convergence checking methods.
- class [SolverRAS](#)
An implementation of the solver interface using the RAS solver.
- struct [Utils](#)
The utilities class which provides some checks and basic utilities.

6.2.1 Detailed Description

The Schwarz wrappers namespace.

6.3 schwz::CommHelpers Namespace Reference

The CommHelper namespace .

6.3.1 Detailed Description

The CommHelper namespace .

comm_helpers

6.4 schwz::conv_tools Namespace Reference

The [conv_tools](#) namespace .

6.4.1 Detailed Description

The [conv_tools](#) namespace .

[conv_tools](#)

6.5 schwz::EventHelpers Namespace Reference

The EventHelper namespace .

6.5.1 Detailed Description

The EventHelper namespace .

event_helpers

6.6 schwz::PartitionTools Namespace Reference

The [PartitionTools](#) namespace .

6.6.1 Detailed Description

The [PartitionTools](#) namespace .

part_tools

6.7 schwz::SolverTools Namespace Reference

The [SolverTools](#) namespace .

6.7.1 Detailed Description

The [SolverTools](#) namespace .

solver_tools

Chapter 7

Class Documentation

7.1 BadDimension Class Reference

[BadDimension](#) is thrown if an operation is being applied to a LinOp with bad dimensions.

```
#include <exception.hpp>
```

Public Member Functions

- [BadDimension](#) (const std::string &file, int line, const std::string &func, const std::string &op_name, std::size_t op_num_rows, std::size_t op_num_cols, const std::string &clarification)
Initializes a bad dimension error.

7.1.1 Detailed Description

[BadDimension](#) is thrown if an operation is being applied to a LinOp with bad dimensions.

7.1.2 Constructor & Destructor Documentation

7.1.2.1 BadDimension()

```
BadDimension::BadDimension (
    const std::string & file,
    int line,
    const std::string & func,
    const std::string & op_name,
    std::size_t op_num_rows,
    std::size_t op_num_cols,
    const std::string & clarification ) [inline]
```

Initializes a bad dimension error.

Parameters

| | |
|----------------------|--|
| <i>file</i> | The name of the offending source file |
| <i>line</i> | The source code line number where the error occurred |
| <i>func</i> | The function name where the error occurred |
| <i>op_name</i> | The name of the operator |
| <i>op_num_rows</i> | The row dimension of the operator |
| <i>op_num_cols</i> | The column dimension of the operator |
| <i>clarification</i> | An additional message further describing the error |

```

115         : Error(file, line,
116               func + ": Object " + op_name + " has dimensions [" +
117                   std::to_string(op_num_rows) + " x " +
118                   std::to_string(op_num_cols) + "]: " + clarification)
119     {}

```

The documentation for this class was generated from the following file:

- exception.hpp (35a1195)

7.2 schwz::Settings::comm_settings Struct Reference

The settings for the various available communication paradigms.

```
#include <settings.hpp>
```

Public Attributes

- bool `enable_onesided` = false
Enable one-sided communication.
- bool `enable_overlap` = false
Enable explicit overlap between communication and computation.
- bool `enable_put` = false
Put the data to the window using MPI_Put rather than get.
- bool `enable_get` = true
Get the data to the window using MPI_Get rather than put.
- bool `enable_one_by_one` = false
Push each element separately directly into the buffer.
- bool `enable_flush_local` = false
Use local flush.
- bool `enable_flush_all` = true
Use flush all.
- bool `enable_lock_local` = false
Use local locks.
- bool `enable_lock_all` = true
Use lock all.

7.2.1 Detailed Description

The settings for the various available communication paradigms.

The documentation for this struct was generated from the following file:

- settings.hpp (1a4d86f)

7.3 schwz::Communicate< ValueType, IndexType, MixedValueType >::comm_struct Struct Reference

The communication struct used to store the communication data.

```
#include <communicate.hpp>
```

Public Attributes

- int [num_neighbors_in](#)
The number of neighbors this subdomain has to receive data from.
- int [num_neighbors_out](#)
The number of neighbors this subdomain has to send data to.
- int [num_rcv](#)
The total number of elements received from all neighbors.
- int [num_send](#)
The total number of elements sent to all neighbors.
- std::shared_ptr< gko::Array< IndexType > > [neighbors_in](#)
The neighbors this subdomain has to receive data from.
- std::shared_ptr< gko::Array< IndexType > > [neighbors_out](#)
The neighbors this subdomain has to send data to.
- std::vector< bool > [is_local_neighbor](#)
The bool vector which is true if the neighbors of a subdomain are in one node.
- int [local_num_neighbors_in](#)
The number of neighbors this subdomain has to receive data from.
- int [local_num_neighbors_out](#)
The number of neighbors this subdomain has to send data to.
- std::shared_ptr< gko::Array< IndexType > > [local_neighbors_in](#)
The neighbors this subdomain has to receive data from.
- std::shared_ptr< gko::Array< IndexType > > [local_neighbors_out](#)
The neighbors this subdomain has to send data to.
- std::shared_ptr< gko::Array< IndexType * > > [global_put](#)
The array containing the number of elements that each subdomain sends from the other.
- std::shared_ptr< gko::Array< IndexType * > > [local_put](#)
The array containing the number of elements that each subdomain sends from the other.
- std::shared_ptr< gko::Array< IndexType * > > [remote_put](#)
The array containing the number of elements that each subdomain sends from the other.
- std::shared_ptr< gko::Array< IndexType * > > [global_get](#)
The array containing the number of elements that each subdomain gets from the other.
- std::shared_ptr< gko::Array< IndexType * > > [local_get](#)

- The array containing the number of elements that each subdomain gets from the other.*

 - `std::shared_ptr< gko::Array< IndexType * > >` [remote_get](#)
- The array containing the number of elements that each subdomain gets from the other.*

 - `std::shared_ptr< gko::Array< IndexType > >` [window_ids](#)
- The RDMA window ids.*

 - `std::shared_ptr< gko::Array< IndexType > >` [windows_from](#)
- The RDMA window ids to receive data from.*

 - `std::shared_ptr< gko::Array< IndexType > >` [windows_to](#)
- The RDMA window ids to send data to.*

 - `std::shared_ptr< gko::Array< MPI_Request > >` [put_request](#)
- The put request array.*

 - `std::shared_ptr< gko::Array< MPI_Request > >` [get_request](#)
- The get request array.*

- The RDMA window for the recv buffer.*

- MPI_Win [window_send_buffer](#)
The RDMA window for the send buffer.
- MPI_Win [window_x](#)
The RDMA window for the solution vector.

7.3.1 Detailed Description

```
template<typename ValueType, typename IndexType, typename MixedValueType>
struct schwz::Communicate< ValueType, IndexType, MixedValueType >::comm_struct
```

The communication struct used to store the communication data.

7.3.2 Member Data Documentation

7.3.2.1 global_get

```
template<typename ValueType , typename IndexType , typename MixedValueType >
std::shared_ptr<gko::Array<IndexType *> > schwz::Communicate< ValueType, IndexType, Mixed←
ValueType >::comm_struct::global_get
```

The array containing the number of elements that each subdomain gets from the other.

For example. `global_get[p][0]` contains the overall number of elements to be received to subdomain `p` and `global←_put[p][i]` contains the index of the solution vector to be received from subdomain `p`.

Referenced by `schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::initialize()`, `schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_comm_buffers()`, and `schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_windows()`.

7.3.2.2 global_put

```
template<typename ValueType , typename IndexType , typename MixedValueType >
std::shared_ptr<gko::Array<IndexType *> > schwz::Communicate< ValueType, IndexType, Mixed←
ValueType >::comm_struct::global_put
```

The array containing the number of elements that each subdomain sends from the other.

For example. `global_put[p][0]` contains the overall number of elements to be sent to subdomain `p` and `global_put[p][i]` contains the index of the solution vector to be sent to subdomain `p`.

Referenced by `schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::initialize()`, `schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_comm_buffers()`, and `schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_windows()`.

7.3.2.3 is_local_neighbor

```
template<typename ValueType , typename IndexType , typename MixedValueType >
std::vector<bool> schwz::Communicate< ValueType, IndexType, MixedValueType >::comm_struct←
::is_local_neighbor
```

The bool vector which is true if the neighbors of a subdomain are in one node.

Referenced by schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::initialize(), schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_comm_buffers(), and schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_windows().

7.3.2.4 local_get

```
template<typename ValueType , typename IndexType , typename MixedValueType >
std::shared_ptr<gko::Array<IndexType *> > schwz::Communicate< ValueType, IndexType, Mixed←
ValueType >::comm_struct::local_get
```

The array containing the number of elements that each subdomain gets from the other.

For example. global_get[p][0] contains the overall number of elements to be received to subdomain p and global←_put[p][i] contains the index of the solution vector to be received from subdomain p.

Referenced by schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_comm_buffers(), and schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_windows().

7.3.2.5 local_put

```
template<typename ValueType , typename IndexType , typename MixedValueType >
std::shared_ptr<gko::Array<IndexType *> > schwz::Communicate< ValueType, IndexType, Mixed←
ValueType >::comm_struct::local_put
```

The array containing the number of elements that each subdomain sends from the other.

For example. global_put[p][0] contains the overall number of elements to be sent to subdomain p and global_put[p][i] contains the index of the solution vector to be sent to subdomain p.

Referenced by schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_comm_buffers(), and schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_windows().

7.3.2.6 remote_get

```
template<typename ValueType , typename IndexType , typename MixedValueType >
std::shared_ptr<gko::Array<IndexType *> > schwz::Communicate< ValueType, IndexType, Mixed←
ValueType >::comm_struct::remote_get
```

The array containing the number of elements that each subdomain gets from the other.

For example. global_get[p][0] contains the overall number of elements to be received to subdomain p and global←_put[p][i] contains the index of the solution vector to be received from subdomain p.

Referenced by schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_comm_buffers(), and schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_windows().

7.3.2.7 remote_put

```
template<typename ValueType , typename IndexType , typename MixedValueType >
std::shared_ptr<gko::Array<IndexType *> > schwz::Communicate< ValueType, IndexType, MixedValueType >::comm_struct::remote_put
```

The array containing the number of elements that each subdomain sends from the other.

For example. `global_put[p][0]` contains the overall number of elements to be sent to subdomain `p` and `global_put[p][i]` contains the index of the solution vector to be sent to subdomain `p`.

Referenced by `schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_comm_buffers()`, and `schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_windows()`.

The documentation for this struct was generated from the following file:

- `communicate.hpp` (1bdbc6b)

7.4 schwz::Communicate< ValueType, IndexType, MixedValueType > Class Template Reference

The communication class that provides the methods for the communication between the subdomains.

```
#include <communicate.hpp>
```

Classes

- struct `comm_struct`
The communication struct used to store the communication data.

Public Member Functions

- virtual void `setup_comm_buffers` ()=0
Sets up the communication buffers needed for the boundary exchange.
- virtual void `setup_windows` (const `Settings` &settings, const `Metadata`< ValueType, IndexType > &metadata, std::shared_ptr< gko::matrix::Dense< ValueType >> &main_buffer)=0
Sets up the windows needed for the asynchronous communication.
- virtual void `exchange_boundary` (const `Settings` &settings, const `Metadata`< ValueType, IndexType > &metadata, const std::shared_ptr< gko::matrix::Dense< ValueType >> &prev_global_solution, std::shared_ptr< gko::matrix::Dense< ValueType >> &global_solution, std::shared_ptr< gko::matrix::Dense< ValueType >> &prev_event_solution, std::ofstream &fps, std::ofstream &fpr)=0
Exchanges the elements of the solution vector.
- void `local_to_global_vector` (const `Settings` &settings, const `Metadata`< ValueType, IndexType > &metadata, const std::shared_ptr< gko::matrix::Dense< ValueType >> &local_vector, std::shared_ptr< gko::matrix::Dense< ValueType >> &global_vector)
Transforms data from a local vector to a global vector.
- virtual void `update_boundary` (const `Settings` &settings, const `Metadata`< ValueType, IndexType > &metadata, std::shared_ptr< gko::matrix::Dense< ValueType >> &local_solution, const std::shared_ptr< gko::matrix::Dense< ValueType >> &local_rhs, const std::shared_ptr< gko::matrix::Dense< ValueType >> &global_solution, const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &interface_matrix)=0
Update the values into local vector from obtained from the neighboring sub-domains using the interface matrix.
- void `clear` (`Settings` &settings)
Clears the data.

7.4.1 Detailed Description

```
template<typename ValueType, typename IndexType, typename MixedValueType>
class schwz::Communicate< ValueType, IndexType, MixedValueType >
```

The communication class that provides the methods for the communication between the subdomains.

Template Parameters

| | |
|------------------|--|
| <i>ValueType</i> | The type of the floating point values. |
| <i>IndexType</i> | The type of the index type values. |

Communicate

7.4.2 Member Function Documentation

7.4.2.1 exchange_boundary()

```
template<typename ValueType , typename IndexType , typename MixedValueType >
void schwz::Communicate< ValueType, IndexType, MixedValueType >::exchange_boundary (
    const Settings & settings,
    const Metadata< ValueType, IndexType > & metadata,
    const std::shared_ptr< gko::matrix::Dense< ValueType >> & prev_global_solution,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & global_solution,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & prev_event_solution,
    std::ofstream & fps,
    std::ofstream & fpr ) [pure virtual]
```

Exchanges the elements of the solution vector.

Parameters

| | |
|------------------------|---|
| <i>settings</i> | The settings struct. |
| <i>metadata</i> | The metadata struct. |
| <i>global_solution</i> | The solution vector being exchanged between the subdomains. |

Implemented in [schwz::SolverRAS< ValueType, IndexType, MixedValueType >](#).

Referenced by [schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::run\(\)](#).

7.4.2.2 local_to_global_vector()

```
template<typename ValueType , typename IndexType , typename MixedValueType >
void schwz::Communicate< ValueType, IndexType, MixedValueType >::local_to_global_vector (
```

```

const Settings & settings,
const Metadata< ValueType, IndexType > & metadata,
const std::shared_ptr< gko::matrix::Dense< ValueType >> & local_vector,
std::shared_ptr< gko::matrix::Dense< ValueType >> & global_vector )

```

Transforms data from a local vector to a global vector.

Parameters

| | |
|----------------------|--------------------------------|
| <i>settings</i> | The settings struct. |
| <i>metadata</i> | The metadata struct. |
| <i>local_vector</i> | The local vector in question. |
| <i>global_vector</i> | The global vector in question. |

Referenced by schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::run().

```

71 {
72     using vec = gko::matrix::Dense<ValueType>;
73     auto alpha = gko::initialize<gko::matrix::Dense<ValueType>>(
74         {1.0}, settings.executor);
75     auto temp_vector = vec::create(
76         settings.executor, gko::dim<2>(metadata.local_size, 1),
77         gko::Array<ValueType>::view(
78             settings.executor, metadata.local_size,
79             &global_vector->get_values()[metadata.first_row
80                                     ->get_data()[metadata.my_rank]]),
81         1);
82
83     auto temp_vector2 = vec::create(
84         settings.executor, gko::dim<2>(metadata.local_size, 1),
85         gko::Array<ValueType>::view(settings.executor, metadata.local_size,
86                                     local_vector->get_values()),
87         1);
88     if (settings.convergence_settings.convergence_crit ==
89         Settings::convergence_settings::local_convergence_crit::
90             residual_based) {
91         local_vector->add_scaled(alpha.get(), temp_vector.get());
92         temp_vector->add_scaled(alpha.get(), local_vector.get());
93     } else {
94         temp_vector->copy_from(temp_vector2.get());
95     }
96 }

```

7.4.2.3 setup_windows()

```

template<typename ValueType , typename IndexType , typename MixedValueType >
void schwz::Communicate< ValueType, IndexType, MixedValueType >::setup_windows (
    const Settings & settings,
    const Metadata< ValueType, IndexType > & metadata,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & main_buffer ) [pure virtual]

```

Sets up the windows needed for the asynchronous communication.

Parameters

| | |
|--------------------|---|
| <i>settings</i> | The settings struct. |
| <i>metadata</i> | The metadata struct. |
| <i>main_buffer</i> | The main buffer being exchanged between the subdomains. |

Implemented in [schwz::SolverRAS< ValueType, IndexType, MixedValueType >](#).

Referenced by [schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::run\(\)](#).

7.4.2.4 update_boundary()

```
template<typename ValueType , typename IndexType , typename MixedValueType >
void schwz::Communicate< ValueType, IndexType, MixedValueType >::update_boundary (
    const Settings & settings,
    const Metadata< ValueType, IndexType > & metadata,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & local_solution,
    const std::shared_ptr< gko::matrix::Dense< ValueType >> & local_rhs,
    const std::shared_ptr< gko::matrix::Dense< ValueType >> & global_solution,
    const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & interface_↵
matrix ) [pure virtual]
```

Update the values into local vector from obtained from the neighboring sub-domains using the interface matrix.

Parameters

| | |
|----------------------------|---|
| <i>settings</i> | The settings struct. |
| <i>metadata</i> | The metadata struct. |
| <i>local_solution</i> | The local solution vector in the subdomain. |
| <i>local_rhs</i> | The local right hand side vector in the subdomain. |
| <i>global_solution</i> | The workspace solution vector. |
| <i>global_old_solution</i> | The global solution vector of the previous iteration. |
| <i>interface_matrix</i> | The interface matrix containing the interface and the overlap data mainly used for exchanging values between different sub-domains. |

Implemented in [schwz::SolverRAS< ValueType, IndexType, MixedValueType >](#).

Referenced by [schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::run\(\)](#).

7.6 CudaError Class Reference

[CudaError](#) is thrown when a CUDA routine throws a non-zero error code.

```
#include <exception.hpp>
```

Public Member Functions

- [CudaError](#) (const std::string &file, int line, const std::string &func, int error_code)
Initializes a CUDA error.

7.6.1 Detailed Description

[CudaError](#) is thrown when a CUDA routine throws a non-zero error code.

7.6.2 Constructor & Destructor Documentation

7.6.2.1 CudaError()

```
CudaError::CudaError (
    const std::string & file,
    int line,
    const std::string & func,
    int error_code ) [inline]
```

Initializes a CUDA error.

Parameters

| | |
|-------------------|--|
| <i>file</i> | The name of the offending source file |
| <i>line</i> | The source code line number where the error occurred |
| <i>func</i> | The name of the CUDA routine that failed |
| <i>error_code</i> | The resulting CUDA error code |

```
137         : Error(file, line, func + ": " + get_error(error_code))
138     {}
```

The documentation for this class was generated from the following files:

- exception.hpp (35a1195)
- /home/runner/work/schwarz-lib/schwarz-lib/source/exception.cpp (35a1195)

7.7 CusparsedError Class Reference

[CusparsedError](#) is thrown when a cuSPARSE routine throws a non-zero error code.

```
#include <exception.hpp>
```

Public Member Functions

- [CusparsedError](#) (const std::string &file, int line, const std::string &func, int error_code)
Initializes a cuSPARSE error.

7.7.1 Detailed Description

[CusparsedError](#) is thrown when a cuSPARSE routine throws a non-zero error code.

7.7.2 Constructor & Destructor Documentation

7.7.2.1 CusparsedError()

```
CusparsedError::CusparsedError (
    const std::string & file,
    int line,
    const std::string & func,
    int error_code ) [inline]
```

Initializes a cuSPARSE error.

Parameters

| | |
|-------------------|--|
| <i>file</i> | The name of the offending source file |
| <i>line</i> | The source code line number where the error occurred |
| <i>func</i> | The name of the cuSPARSE routine that failed |
| <i>error_code</i> | The resulting cuSPARSE error code |

```
159         : Error(file, line, func + ": " + get_error(error_code))
160     {}
```

The documentation for this class was generated from the following files:

- exception.hpp (35a1195)
- /home/runner/work/schwarz-lib/schwarz-lib/source/exception.cpp (35a1195)

7.8 schwz::device_guard Class Reference

This class defines a device guard for the cuda functions and the cuda module.

```
#include <device_guard.hpp>
```

7.8.1 Detailed Description

This class defines a device guard for the cuda functions and the cuda module.

The guard is used to make sure that the device code is run on the correct cuda device, when run with multiple devices. The class records the current device id and uses `cudaSetDevice` to set the device id to the one being passed in. After the scope has been exited, the destructor sets the `device_id` back to the one before entering the scope.

The documentation for this class was generated from the following file:

- `device_guard.hpp` (5a15602)

7.9 schwz::Initialize< ValueType, IndexType > Class Template Reference

The initialization class that provides methods for initialization of the solver.

```
#include <initialization.hpp>
```

Public Member Functions

- void `generate_rhs` (std::vector< ValueType > &rhs)
Generates the right hand side vector.
- void `generate_dipole_rhs` (std::vector< ValueType > &rhs)
Generates a dipole right hand side vector.
- void `generate_sin_rhs` (std::vector< ValueType > &rhs)
Generates a sinusoidal right hand side vector.
- void `setup_global_matrix` (const std::string &filename, const gko::size_type &oned_laplacian_size, std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &global_matrix)
Generates the 2D global laplacian matrix.
- void `partition` (const Settings &settings, const Metadata< ValueType, IndexType > &metadata, const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &global_matrix, std::vector< unsigned int > &partition_indices)
The partitioning function.
- void `setup_vectors` (const Settings &settings, const Metadata< ValueType, IndexType > &metadata, std::vector< ValueType > &rhs, std::shared_ptr< gko::matrix::Dense< ValueType >> &local_rhs, std::shared_ptr< gko::matrix::Dense< ValueType >> &global_rhs, std::shared_ptr< gko::matrix::Dense< ValueType >> &local_solution)
Setup the vectors with default values and allocate memory if not allocated.
- virtual void `setup_local_matrices` (Settings &settings, Metadata< ValueType, IndexType > &metadata, std::vector< unsigned int > &partition_indices, std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &global_matrix, std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &local_matrix, std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &interface_matrix)=0
Sets up the local and the interface matrices from the global matrix and the partition indices.

Public Attributes

- `std::vector< unsigned int >` [partition_indices](#)
The partition indices containing the subdomains to which each row(vertex) of the matrix(graph) belongs to.
- `std::vector< unsigned int >` [cell_weights](#)
The cell weights for the partition algorithm.

Additional Inherited Members

7.9.1 Detailed Description

```
template<typename ValueType = gko::default_precision, typename IndexType = gko::int32>
class schwz::Initialize< ValueType, IndexType >
```

The initialization class that provides methods for initialization of the solver.

Template Parameters

| | |
|------------------|--|
| <i>ValueType</i> | The type of the floating point values. |
| <i>IndexType</i> | The type of the index type values. |

Initialization

7.9.2 Member Function Documentation

7.9.2.1 generate_dipole_rhs()

```
template<typename ValueType , typename IndexType >
void schwz::Initialize< ValueType, IndexType >::generate_dipole_rhs (
    std::vector< ValueType > & rhs )
```

Generates a dipole right hand side vector.

Parameters

| | |
|------------|-----------------|
| <i>rhs</i> | The rhs vector. |
|------------|-----------------|

Referenced by `schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::initialize()`.

```
101 {
102     auto oned_laplacian_size = metadata.oned_laplacian_size;
103
104     // Placing dipole at 1/4 and 3/4 of Y-dim at the middle of X-dim
105     for (int i = 0; i < oned_laplacian_size; i++) {
106         for (int j = 0; j < oned_laplacian_size; j++) {
107             if (i == oned_laplacian_size / 4 && j == oned_laplacian_size / 2)
108                 rhs[i * oned_laplacian_size + j] = 100.0;
```

```

109         else if (i == 3 * oned_laplacian_size / 4 &&
110                j == oned_laplacian_size / 2)
111             rhs[i * oned_laplacian_size + j] = -100.0;
112         else
113             rhs[i * oned_laplacian_size + j] = 0.0;
114     }
115 }
116 }

```

7.9.2.2 generate_rhs()

```

template<typename ValueType , typename IndexType >
void schwz::Initialize< ValueType, IndexType >::generate_rhs (
    std::vector< ValueType > & rhs )

```

Generates the right hand side vector.

Parameters

| | |
|------------|-----------------|
| <i>rhs</i> | The rhs vector. |
|------------|-----------------|

Referenced by schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::initialize().

```

90 {
91     std::uniform_real_distribution<double> unif(0.0, 1.0);
92     std::default_random_engine engine;
93     for (gko::size_type i = 0; i < rhs.size(); ++i) {
94         rhs[i] = unif(engine);
95     }
96 }

```

7.9.2.3 generate_sin_rhs()

```

template<typename ValueType , typename IndexType >
void schwz::Initialize< ValueType, IndexType >::generate_sin_rhs (
    std::vector< ValueType > & rhs )

```

Generates a sinusoidal right hand side vector.

Parameters

| | |
|------------|-----------------|
| <i>rhs</i> | The rhs vector. |
|------------|-----------------|

References schwz::Initialize< ValueType, IndexType >::setup_global_matrix().

Referenced by schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::initialize().

```

121 {
122     auto PI = (ValueType)(atan(1.0) * 4);
123     auto oned_laplacian_size = metadata.oned_laplacian_size;

```

```

124
125     // Source = sin(x)sin(y)
126     for (int i = 0; i < oned_laplacian_size; i++) {
127         for (int j = 0; j < oned_laplacian_size; j++) {
128             rhs[i * oned_laplacian_size + j] =
129                 sin(2 * PI * i / oned_laplacian_size) *
130                 sin(2 * PI * j / oned_laplacian_size);
131         }
132     }
133 }

```

7.9.2.4 partition()

```

template<typename ValueType , typename IndexType >
void schwz::Initialize< ValueType, IndexType >::partition (
    const Settings & settings,
    const Metadata< ValueType, IndexType > & metadata,
    const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & global_↵
matrix,
    std::vector< unsigned int > & partition_indices )

```

The partitioning function.

Allows the partition of the global matrix depending with METIS and a regular 1D decomposition.

Parameters

| | |
|--------------------------|---------------------------------|
| <i>settings</i> | The settings struct. |
| <i>metadata</i> | The metadata struct. |
| <i>global_matrix</i> | The global matrix. |
| <i>partition_indices</i> | The partition indices [OUTPUT]. |

References `schwz::Metadata< ValueType, IndexType >::global_size`, `schwz::Metadata< ValueType, IndexType >::my_rank`, `schwz::Metadata< ValueType, IndexType >::num_subdomains`, and `schwz::Settings::write_debug_↵` out.

Referenced by `schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::initialize()`.

```

320 {
321     partition_indices.resize(metadata.global_size);

```

7.9.2.6 setup_local_matrices()

```

template<typename ValueType , typename IndexType >
void schwz::Initialize< ValueType, IndexType >::setup_local_matrices (
    Settings & settings,
    Metadata< ValueType, IndexType > & metadata,
    std::vector< unsigned int > & partition_indices,
    std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & global_matrix,
    std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & local_matrix,
    std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & interface_matrix )
[pure virtual]

```

Sets up the local and the interface matrices from the global matrix and the partition indices.

Parameters

| | |
|--------------------------|---|
| <i>settings</i> | The settings struct. |
| <i>metadata</i> | The metadata struct. |
| <i>partition_indices</i> | The array containing the partition indices. |
| <i>global_matrix</i> | The global system matrix. |

Parameters

| | |
|-------------------------|---|
| <i>local_matrix</i> | The local system matrix. |
| <i>interface_matrix</i> | The interface matrix containing the interface and the overlap data mainly used for exchanging values between different sub-domains. |
| <i>local_perm</i> | The local permutation, obtained through RCM or METIS. |

Implemented in [schwz::SolverRAS< ValueType, IndexType, MixedValueType >](#).

Referenced by [schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::initialize\(\)](#).

7.9.2.7 setup_vectors()

```
template<typename ValueType , typename IndexType >
void schwz::Initialize< ValueType, IndexType >::setup_vectors (
    const Settings & settings,
    const Metadata< ValueType, IndexType > & metadata,
    std::vector< ValueType > & rhs,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & local_rhs,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & global_rhs,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & local_solution )
```

Setup the vectors with default values and allocate mameory if not allocated.

Parameters

| | |
|-----------------------|--|
| <i>settings</i> | The settings struct. |
| <i>metadata</i> | The metadata struct. |
| <i>local_rhs</i> | The local right hand side vector in the subdomain. |
| <i>global_rhs</i> | The global right hand side vector. |
| <i>local_solution</i> | The local solution vector in the subdomain. |

7.10 `schwz::Metadata< ValueType, IndexType >` Struct Template Reference

The solver metadata struct.

```
#include <settings.hpp>
```

Classes

- struct `post_process_data`
The struct used for storing data for post-processing.

Public Attributes

- MPI_Comm `mpi_communicator`
The MPI communicator.
- `gko::size_type` `global_size` = 0
The size of the global matrix.
- `gko::size_type` `oned_laplacian_size` = 0
The size of the 1 dimensional laplacian grid.
- `gko::size_type` `local_size` = 0
The size of the local subdomain matrix.
- `gko::size_type` `local_size_x` = 0
The size of the local subdomain matrix + the overlap.
- `gko::size_type` `local_size_o` = 0
The size of the local subdomain matrix + the overlap.
- `gko::size_type` `overlap_size` = 0
The size of the overlap between the subdomains.
- `gko::size_type` `num_subdomains` = 1
The number of subdomains used within the solver.
- int `my_rank`
The rank of the subdomain.
- int `my_local_rank`
The local rank of the subdomain.
- int `local_num_procs`
The local number of procs in the subdomain.
- int `comm_size`
The number of subdomains used within the solver, size of the communicator.
- int `num_threads`
The number of threads used within the solver for each subdomain.
- IndexType `iter_count`
The iteration count of the solver.
- ValueType `tolerance`
The tolerance of the complete solver.

- ValueType [local_solver_tolerance](#)
The tolerance of the local solver in case of an iterative solve.
- IndexType [max_iters](#)
The maximum iteration count of the Schwarz solver.
- IndexType [local_max_iters](#)
The maximum iteration count of the local iterative solver.
- IndexType [updated_max_iters](#)
The updated maximum iteration count of the local iterative solver.
- std::string [local_precond](#)
Local preconditioner.
- unsigned int [precond_max_block_size](#)
The maximum block size for the preconditioner.
- ValueType [current_residual_norm](#) = -1.0
The current residual norm of the subdomain.
- ValueType [min_residual_norm](#) = -1.0
The minimum residual norm of the subdomain.
- ValueType [constant](#) = 0.0
Value of constant for event threshold Relevant for cgammak threshold.
- ValueType [gamma](#) = 0.0
Value of gamma for event threshold Relevant for cgammak threshold.
- ValueType [horizon](#) = 0.0
Value of horizon for the event threshold Relevant for slope-based threshold.
- ValueType [decay_param](#) = 0.0
Value of decay parameter for the event threshold Relevant for slope-based threshold.
- IndexType [sent_history](#) = 0
Value of history at the sender.
- IndexType [recv_history](#) = 0
Value of history at the receiver.
- IndexType [comm_start_iters](#) = 0
Number of iterations to communicate before event comm.
- std::vector< std::tuple< int, int, int, std::string, std::vector< ValueType > > > [time_struct](#)
The struct used to measure the timings of each function within the solver loop.
- std::vector< std::tuple< int, std::vector< std::tuple< int, int > >, std::vector< std::tuple< int, int > >, int, int > > [comm_data_struct](#)
The struct used to measure the timings of each function within the solver loop.
- std::shared_ptr< gko::Array< IndexType > > [global_to_local](#)
The mapping containing the global to local indices.
- std::shared_ptr< gko::Array< IndexType > > [local_to_global](#)
The mapping containing the local to global indices.
- std::shared_ptr< gko::Array< IndexType > > [overlap_row](#)
The overlap row indices.
- std::shared_ptr< gko::Array< IndexType > > [first_row](#)
The starting row of each subdomain in the matrix.
- std::shared_ptr< gko::Array< IndexType > > [permutation](#)
The permutation used for the re-ordering.
- std::shared_ptr< gko::Array< IndexType > > [i_permutation](#)
The inverse permutation used for the re-ordering.

7.10.1 Detailed Description

```
template<typename ValueType, typename IndexType>  
struct schwz::Metadata< ValueType, IndexType >
```

The solver metadata struct.

Template Parameters

| | |
|------------------|--|
| <i>ValueType</i> | The type of the floating point values. |
| <i>IndexType</i> | The type of the index type values. |

7.10.2 Member Data Documentation

7.10.2.1 local_solver_tolerance

```
template<typename ValueType, typename IndexType>
ValueType schwz::Metadata< ValueType, IndexType >::local_solver_tolerance
```

The tolerance of the local solver in case of an iterative solve.

The residual norm reduction required.

7.10.2.2 tolerance

```
template<typename ValueType, typename IndexType>
ValueType schwz::Metadata< ValueType, IndexType >::tolerance
```

The tolerance of the complete solver.

The residual norm reduction required.

The documentation for this struct was generated from the following file:

- settings.hpp (1a4d86f)

7.11 MetisError Class Reference

[MetisError](#) is thrown when a METIS routine throws a non-zero error code.

```
#include <exception.hpp>
```

Public Member Functions

- [MetisError](#) (const std::string &file, int line, const std::string &func, int error_code)
Initializes a METIS error.

7.11.1 Detailed Description

[MetisError](#) is thrown when a METIS routine throws a non-zero error code.

7.11.2 Constructor & Destructor Documentation

7.11.2.1 MetisError()

```
MetisError::MetisError (
    const std::string & file,
    int line,
    const std::string & func,
    int error_code ) [inline]
```

Initializes a METIS error.

Parameters

| | |
|-------------------|--|
| <i>file</i> | The name of the offending source file |
| <i>line</i> | The source code line number where the error occurred |
| <i>func</i> | The name of the METIS routine that failed |
| <i>error_code</i> | The resulting METIS error code |

```
182         : Error(file, line, func + ": " + get_error(error_code))
183     {}
```

7.12 schwz::Metadata< ValueType, IndexType >::post_process_data Struct Reference

The struct used for storing data for post-processing.

```
#include <settings.hpp>
```

7.12.1 Detailed Description

```
template<typename ValueType, typename IndexType>
struct schwz::Metadata< ValueType, IndexType >::post_process_data
```

The struct used for storing data for post-processing.

The documentation for this struct was generated from the following file:

- settings.hpp (1a4d86f)

7.13 schwz::SchwarzBase< ValueType, IndexType, MixedValueType > Class Template Reference

The Base solver class is meant to be the class implementing the common implementations for all the schwarz methods.

```
#include <schwarz_base.hpp>
```

Public Member Functions

- [SchwarzBase](#) ([Settings](#) &settings, [Metadata](#)< ValueType, IndexType > &metadata)
The constructor that takes in the user settings and a metadata struct containing the solver metadata.
- void [initialize](#) ()
Initialize the matrix and vectors.
- void [run](#) (std::shared_ptr< gko::matrix::Dense< ValueType >> &solution)
The function that runs the actual solver and obtains the final solution.
- void [print_vector](#) (const std::shared_ptr< gko::matrix::Dense< ValueType >> &vector, int subd, std::string name)
The auxiliary function that prints a passed in vector.
- void [print_matrix](#) (const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &matrix, int rank, std::string name)
The auxiliary function that prints a passed in CSR matrix.

Public Attributes

- std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> [local_matrix](#)
The local subdomain matrix.
- std::shared_ptr< gko::matrix::Permutation< IndexType >> [local_perm](#)
The local subdomain permutation matrix/array.
- std::shared_ptr< gko::matrix::Permutation< IndexType >> [local_inv_perm](#)
The local subdomain inverse permutation matrix/array.
- std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> [triangular_factor_l](#)
The local lower triangular factor used for the triangular solves.
- std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> [triangular_factor_u](#)
The local upper triangular factor used for the triangular solves.
- std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> [interface_matrix](#)
The local interface matrix.
- std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> [global_matrix](#)
The global matrix.
- std::shared_ptr< gko::matrix::Dense< ValueType >> [local_rhs](#)
The local right hand side.
- std::shared_ptr< gko::matrix::Dense< ValueType >> [global_rhs](#)
The global right hand side.
- std::shared_ptr< gko::matrix::Dense< ValueType >> [local_solution](#)
The local solution vector.
- std::shared_ptr< gko::matrix::Dense< ValueType >> [prev_event_solution](#)
The (local+overlap) solution vector at time of previous event of communication The size of this vector is considered global_size to account for overlap.
- std::shared_ptr< gko::matrix::Dense< ValueType >> [global_solution](#)
The global solution vector.
- std::vector< ValueType > [local_residual_vector_out](#)
The global residual vector.
- std::vector< std::vector< ValueType >> [global_residual_vector_out](#)
The local residual vector.

Additional Inherited Members

7.13.1 Detailed Description

```
template<typename ValueType = gko::default_precision, typename IndexType = gko::int32, typename MixedValueType = gko::
::default_precision>
class schwz::SchwarzBase< ValueType, IndexType, MixedValueType >
```

The Base solver class is meant to be the class implementing the common implementations for all the schwarz methods.

It derives from the Initialization class, the Communication class and the [Solve](#) class all of which are templated.

Template Parameters

| | |
|------------------|--|
| <i>ValueType</i> | The type of the floating point values. |
| <i>IndexType</i> | The type of the index type values. |

7.13.2 Constructor & Destructor Documentation

7.13.2.1 SchwarzBase()

```
template<typename ValueType , typename IndexType , typename MixedValueType >
schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::SchwarzBase (
    Settings & settings,
    Metadata< ValueType, IndexType > & metadata )
```

The constructor that takes in the user settings and a metadata struct containing the solver metadata.

Parameters

| | |
|-----------------|----------------------|
| <i>settings</i> | The settings struct. |
| <i>metadata</i> | The metadata struct. |

7.13.3 Member Function Documentation

7.13.3.1 print_matrix()

template<typename ValueType = gko::default_precision, typename IndexType = gko::int32, typename MixedValueType = gko::default_precision>

```

void schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::print_matrix (
    const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & matrix,
    int rank,
    std::string name )

```

The auxiliary function that prints a passed in CSR matrix.

Parameters

| | |
|---------------|---|
| <i>matrix</i> | The matrix to be printed. |
| <i>subd</i> | The subdomain on which the vector exists. |
| <i>name</i> | The name of the matrix as a string. |

7.13.3.2 print_vector()

```
template<typename ValueType = gko::default_precision, typename IndexType = gko::int32, typename
MixedValueType = gko::default_precision>
void schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::print_vector (
    const std::shared_ptr< gko::matrix::Dense< ValueType >> & vector,
    int subd,
    std::string name )
```

The auxiliary function that prints a passed in vector.

Parameters

| | |
|---------------|---|
| <i>vector</i> | The vector to be printed. |
| <i>subd</i> | The subdomain on which the vector exists. |
| <i>name</i> | The name of the vector as a string. |

7.13.3.3 run()

```
template<typename ValueType , typename IndexType , typename MixedValueType >
void schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::run (
    std::shared_ptr< gko::matrix::Dense< ValueType >> & solution )
```

The function that runs the actual solver and obtains the final solution.

Parameters

| | |
|-----------------|----------------------|
| <i>solution</i> | The solution vector. |
|-----------------|----------------------|

7.14 schwz::Settings Struct Reference

The struct that contains the solver settings and the parameters to be set by the user.

```
#include <settings.hpp>
```

Classes

- struct [comm_settings](#)
The settings for the various available communication paradigms.
- struct [convergence_settings](#)
The various convergence settings available.

Public Types

- enum [partition_settings](#)
The partition algorithm to be used for partitioning the matrix.
- enum [local_solver_settings](#)
The local solver algorithm for the local subdomain solves.

Public Attributes

- std::string [executor_string](#)
The string that contains the ginkgo executor paradigm.
- std::shared_ptr< gko::Executor > [executor](#) = gko::ReferenceExecutor::create()
The ginkgo executor the code is to be executed on.
- std::shared_ptr< [device_guard](#) > [cuda_device_guard](#)
The ginkgo executor the code is to be executed on.
- gko::int32 [overlap](#) = 2
The overlap between the subdomains.
- std::string [matrix_filename](#) = "null"
The string that contains the matrix file name to read from .
- bool [explicit_laplacian](#) = true
Flag if the laplacian matrix should be generated within the library.
- bool [use_mixed_precision](#) = false
Flag if mixed precision should be used.
- bool [enable_random_rhs](#) = false
Flag to enable a random rhs.
- std::string [rhs_type](#) = "ones"
Flag to enable a random rhs.
- std::string [thres_type](#) = "cgammak"
Flag to choose thres type.
- std::string [norm_type](#) = "L1"
Flag to choose norm type.
- bool [print_matrices](#) = false
Flag to enable printing of matrices.
- bool [debug_print](#) = false
Flag to enable some debug printing.
- bool [non_symmetric_matrix](#) = false
Is the matrix non-symmetric ? , Use GMRES for local solves.
- int [restart_iter](#) = 1
The restart iter for the GMRES solver.
- int [reset_local_crit_iter](#) = -1
The global iter at which to reset the local solver criterion.
- bool [naturally_ordered_factor](#) = false

- Disables the re-ordering of the matrix before computing the triangular factors during the CHOLMOD factorization.*

 - `std::string metis_objtype`
This setting defines the objective type for the metis partitioning.
 - `bool use_precond = false`
Enable the block jacobi local preconditioner for the local solver.
 - `bool write_debug_out = false`
Enable the writing of debug out to file.
 - `bool write_iters_and_residuals = false`
Enable writing the iters and residuals to a file.
 - `bool enable_logging = false`
Flag to enable logging for local iterative solvers.
 - `bool write_perm_data = false`
Enable the local permutations from CHOLMOD to a file.
 - `int shifted_iter = 1`
Iteration shift for node local communication.
 - `std::string factorization = "cholmod"`
The factorization for the local direct solver.
 - `std::string reorder`
The reordering for the local solve.

7.14.1 Detailed Description

The struct that contains the solver settings and the parameters to be set by the user.

settings

7.14.2 Member Data Documentation

7.14.2.1 enable_logging

```
bool schwz::Settings::enable_logging = false
```

Flag to enable logging for local iterative solvers.

Note: Probably will have a significant performance hit.

7.14.2.2 explicit_laplacian

```
bool schwz::Settings::explicit_laplacian = true
```

Flag if the laplacian matrix should be generated within the library.

If false, an external matrix and rhs needs to be provided

Referenced by `schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::initialize()`.

7.14.2.3 naturally_ordered_factor

```
bool schwz::Settings::naturally_ordered_factor = false
```

Disables the re-ordering of the matrix before computing the triangular factors during the CHOLMOD factorization.

Note

This is mainly to allow compatibility with GPU solution.

7.14.2.4 norm_type

```
std::string schwz::Settings::norm_type = "L1"
```

Flag to choose norm type.

Choices are "L1" or "L2"

Referenced by `schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_windows()`.

7.14.2.5 thres_type

```
std::string schwz::Settings::thres_type = "cgammak"
```

Flag to choose thres type.

Choices are "cgammak" or "slope"

Referenced by `schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::run()`, and `schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_windows()`.

7.15 schwz::Solve< ValueType, IndexType, MixedValueType > Class Template Reference

The Solver class the provides the solver and the convergence checking methods.

```
#include <solve.hpp>
```

Additional Inherited Members

7.15.1 Detailed Description

```
template<typename ValueType = gko::default_precision, typename IndexType = gko::int32, typename MixedValueType = gko::
::default_precision>
class schwz::Solve< ValueType, IndexType, MixedValueType >
```

The Solver class the provides the solver and the convergence checking methods.

Template Parameters

| | |
|------------------|--|
| <i>ValueType</i> | The type of the floating point values. |
| <i>IndexType</i> | The type of the index type values. |

Solve

The documentation for this class was generated from the following files:

- solve.hpp (13a534d)
- /home/runner/work/schwarz-lib/schwarz-lib/source/solve.cpp (92dbd95)

7.16 schwz::SolverRAS< ValueType, IndexType, MixedValueType > Class Template Reference

An implementation of the solver interface using the RAS solver.

```
#include <restricted_schwarz.hpp>
```

Public Member Functions

- [SolverRAS](#) ([Settings](#) &settings, [Metadata](#)< ValueType, IndexType > &metadata)
The constructor that takes in the user settings and a metadata struct containing the solver metadata.
- void [setup_local_matrices](#) ([Settings](#) &settings, [Metadata](#)< ValueType, IndexType > &metadata, std::vector< unsigned int > &[partition_indices](#), std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &[global_matrix](#), std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &[local_matrix](#), std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &[interface_matrix](#)) override
Sets up the local and the interface matrices from the global matrix and the partition indices.
- void [setup_comm_buffers](#) () override
Sets up the communication buffers needed for the boundary exchange.
- void [setup_windows](#) (const [Settings](#) &settings, const [Metadata](#)< ValueType, IndexType > &metadata, std::shared_ptr< gko::matrix::Dense< ValueType >> &[main_buffer](#)) override
Sets up the windows needed for the asynchronous communication.
- void [exchange_boundary](#) (const [Settings](#) &settings, const [Metadata](#)< ValueType, IndexType > &metadata, const std::shared_ptr< gko::matrix::Dense< ValueType >> &[prev_global_solution](#), std::shared_ptr< gko::matrix::Dense< ValueType >> &[global_solution](#), std::shared_ptr< gko::matrix::Dense< ValueType >> &[prev_event_solution](#), std::ofstream &fps, std::ofstream &fpr) override
Exchanges the elements of the solution vector.
- void [update_boundary](#) (const [Settings](#) &settings, const [Metadata](#)< ValueType, IndexType > &metadata, std::shared_ptr< gko::matrix::Dense< ValueType >> &[local_solution](#), const std::shared_ptr< gko::matrix::Dense< ValueType >> &[local_rhs](#), const std::shared_ptr< gko::matrix::Dense< ValueType >> &[global_solution](#), const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> &[interface_matrix](#)) override
Update the values into local vector from obtained from the neighboring sub-domains using the interface matrix.

Additional Inherited Members

7.16.1 Detailed Description

```
template<typename ValueType = gko::default_precision, typename IndexType = gko::int32, typename MixedValueType = gko::default_precision>
class schwz::SolverRAS< ValueType, IndexType, MixedValueType >
```

An implementation of the solver interface using the RAS solver.

Template Parameters

| | |
|------------------|--|
| <i>ValueType</i> | The type of the floating point values. |
| <i>IndexType</i> | The type of the index type values. |

7.16.2 Constructor & Destructor Documentation

7.16.2.1 SolverRAS()

```
template<typename ValueType , typename IndexType , typename MixedValueType >
schwz::SolverRAS< ValueType, IndexType, MixedValueType >::SolverRAS (
    Settings & settings,
    Metadata< ValueType, IndexType > & metadata )
```

The constructor that takes in the user settings and a metadata struct containing the solver metadata.

Parameters

| | |
|-----------------|-----------------------------|
| <i>settings</i> | The settings struct. |
| <i>metadata</i> | The metadata struct. |
| <i>data</i> | The additional data struct. |

```
52      : SchwarzBase<ValueType, IndexType, MixedValueType>(settings, metadata)
53 {}
```

7.16.3 Member Function Documentation

7.16.3.1 exchange_boundary()

```
template<typename ValueType , typename IndexType , typename MixedValueType >
void schwz::SolverRAS< ValueType, IndexType, MixedValueType >::exchange_boundary (
    const Settings & settings,
    const Metadata< ValueType, IndexType > & metadata,
    const std::shared_ptr< gko::matrix::Dense< ValueType >> & prev_global_solution,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & global_solution,
    std::shared_ptr< gko::matrix::Dense< ValueType >> & prev_event_solution,
    std::ofstream & fps,
    std::ofstream & fpr ) [override], [virtual]
```

Exchanges the elements of the solution vector.

Parameters

| | |
|------------------------|---|
| <i>settings</i> | The settings struct. |
| <i>metadata</i> | The metadata struct. |
| <i>global_solution</i> | The solution vector being exchanged between the subdomains. |

Implements [schwz::Communicate< ValueType, IndexType, MixedValueType >](#).

References [schwz::Settings::comm_settings::enable_onesided](#), [schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::global_solution](#), and [schwz::SchwarzBase< ValueType, IndexType, MixedValueType >::prev←_event_solution](#).

```

1261 {
1262     if (settings.comm_settings.enable_onesided) {
1263         exchange_boundary_onesided<ValueType, IndexType, MixedValueType>(
1264             settings, metadata, this->comm_struct, prev_global_solution,
1265             global_solution, prev_event_solution, fps, fpr);
1266     } else {
1267         exchange_boundary_twosided<ValueType, IndexType, MixedValueType>(
1268             settings, metadata, this->comm_struct, prev_global_solution,
1269             global_solution);
1270     }
1271 }
```

7.16.3.2 setup_local_matrices()

```

template<typename ValueType , typename IndexType , typename MixedValueType >
void schwz::SolverRAS< ValueType, IndexType, MixedValueType >::setup_local_matrices (
    Settings & settings,
    Metadata< ValueType, IndexType > & metadata,
    std::vector< unsigned int > & partition_indices,
    std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & global_matrix,
    std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & local_matrix,
    std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & interface_matrix )
[override], [virtual]
```

Sets up the local and the interface matrices from the global matrix and the partition indices.

Parameters

| | |
|--------------------------|---|
| <i>settings</i> | The settings struct. |
| <i>metadata</i> | The metadata struct. |
| <i>partition_indices</i> | The array containing the partition indices. |
| <i>global_matrix</i> | The global system matrix. |
| <i>local_matrix</i> | The local system matrix. |
| <i>interface_matrix</i> | The interface matrix containing the interface and the overlap data mainly used for exchanging values between different sub-domains. |
| <i>local_perm</i> | The local permutation, obtained through RCM or METIS. |

    const std::shared_ptr< gko::matrix::Csr< ValueType, IndexType >> & interface_←
matrix ) [override], [virtual]

```

Update the values into local vector from obtained from the neighboring sub-domains using the interface matrix.

Parameters

| | |
|----------------------------|---|
| <i>settings</i> | The settings struct. |
| <i>metadata</i> | The metadata struct. |
| <i>local_solution</i> | The local solution vector in the subdomain. |
| <i>local_rhs</i> | The local right hand side vector in the subdomain. |
| <i>global_solution</i> | The workspace solution vector. |
| <i>global_old_solution</i> | The global solution vector of the previous iteration. |
| <i>interface_matrix</i> | The interface matrix containing the interface and the overlap data mainly used for exchanging values between different sub-domains. |

Implements [schwz::Communicate< ValueType, IndexType, MixedValueType >](#).

7.18 schwz::Utils< ValueType, IndexType > Struct Template Reference

The utilities class which provides some checks and basic utilities.

```
#include <utils.hpp>
```

7.18.1 Detailed Description

```
template<typename ValueType = gko::default_precision, typename IndexType = gko::int32>
struct schwz::Utils< ValueType, IndexType >
```

The utilities class which provides some checks and basic utilities.

Template Parameters

| | |
|------------------|--|
| <i>ValueType</i> | The type of the floating point values. |
| <i>IndexType</i> | The type of the index type values. |

Utils

The documentation for this struct was generated from the following files:
